MESSAGE FROM THE CABINET SECRETARY

Forestry research in Kenya which is the key mandate of the Kenya Forestry Research Institute (KEFRI), has witnessed tremendous growth in the country since its inception in the early 1930s. Kenya Forestry Research Institute is the technical arm of the Ministry of Environment, Climate Change and Forestry (MECC&F) and therefore it gives me great pleasure to share the Institute's 7th Strategic Plan 2022-2027. This Strategic Plan adopts a thematic and programme based approach to forestry research and development and is well aligned to the Medium Term Plan IV framework of the Vision 2030, the Kenya Government's Bottom-up Economic Transformation Agenda (BETA), and the MECC&F Strategic Plan 2023-2027.

Forestry research has greatly contributed to development of the country through provision of; information, technologies, and innovations for socio-economic development across many sectors that include; construction, furniture making, energy, agriculture, agroforestry, tourism, and health. KEFRI is contributing to the National Landscape and Ecosystem Restoration Programme through production, processing and distribution of high quality tree seeds for the 15 Billion Tree Growing Strategy by 2032. To achieve objectives of the Strategy, the Government of Kenya has supported KEFRI to expand research infrastructure from six (6) to the current 21, establishment of farmers' resource centres, and the construction of eighteen (18) new seed centres in strategic locations to enhance stakeholder access to quality tree seeds to raise seedlings for the National Landscape and Ecosystem Restoration Programme.

The infrastructure will not only expand the Institute's capacity for forest genetic diversity conservation but also increase its capacity in tree seed processing, storage and distribution from 15 Metric Tonnes (MT) to over 100 MT annually making it the largest undertaking in forestry development in the continent. Decentralization of research and seed centres is part of the country's goal of enhancing technology and information transfer to the society in order to accelerate achievement of 30% tree cover by 2032 and thereby assist the country in accelerating its achievement of the Nationally Determined Contributions (NDC) targets and doubling the restoration from 5.6 million hectares to 10.6 million hectares by 2032 which will also enhance climate change mitigation and adaptation strategies.

We note that, KEFRI in collaboration with national and international partners has improved key commercial tree species that include the pines, cypress, eucalypts, *Gmelina arborea* and indigenous tree species including *Melia volkensii*. *Melia volkensii* has been proven to provide quality timber in 15 years, the shortest rotation period for an indigenous species. Other notable achievements include: provision of improved tree planting materials for various ecological zones; biological control of forest pests and diseases; management of the noxious *Prosopis juliflora* (mathenge) through utilization; development of high value forest products and linking to stakeholders; expert training in forestry and climate change in addition to developing and piloting innovative applications including; JazaMiti to guide the tree growing and track progress hence contributing to achieving the 30% tree cover in the country by 2032.

I believe that implementation of this KEFRI 7th Strategic Plan, shall continue to enhance the Institute's capacity in research, exchange of knowledge and capacity building of stakeholders. My Ministry shall provide the requisite support to ensure this Strategic Plan is successfully implemented and request all stakeholders to partner with KEFRI towards this noble activity to ensure our country attains 30% tree cover by 2032.

A handwritten signature in blue ink, appearing to be 'S. Soipan Tuya', written in a cursive style.

Hon. Soipan Tuya, EGH, CBS
Cabinet Secretary,
Ministry of Environment, Climate Change and Forestry

STATEMENT FROM THE PRINCIPAL SECRETARY

Strengthening forestry research is one of the key strategic objective of the State Department of Forestry (SDF) under the Ministry of Environment, Climate Change and Forestry (MECC&F). The KEFRI's 7th Strategic Plan 2022-2027 which is aligned with the MECC&F's Strategic Plan 2023-2027 provides the foundation upon which the Institute will accomplish its mandate of developing research and development programmes to provide technologies and information for sustainable development of forestry and allied natural resources. The state department of forestry will support KEFRI to implement its mandate of conducting research and development in forestry, undertake specialized trainings, and disseminate information, technologies, and innovations in forestry for sustainable development.

KEFRI is charged with the responsibility of providing quality tree germplasm to meet demands of the eleven (11) interventions as stipulated in the 15 Billion Tree Growing Strategy for accelerated achievement of 30% tree cover by 2032. The Institute has made tremendous efforts in increasing production of quality tree seeds, processing and distribution to stakeholders for commercial forest plantations, agroforestry, fruit tree production, greening urban areas, arboretums, arid and semi-arid lands and other landscape reforestation programmes. The Institute has also proposed to develop technologies for: conservation and sustainable use of bamboo, mangroves and coastal forests and allied resources, improving ecosystem productivity, biodiversity conservation and development of protocols for high value forest products and provide framework for enhancing bioprospecting and utilization of indigenous knowledge in natural resource products for socio-economic development and universal health, in addition to forest policy research and development.

Kenya Forestry Research Institute's 7th Strategic Plan 2022-2027 lays emphasis on the importance of collecting and analyzing data from various forestry related segments to increase the contribution of forestry to the country's Gross Domestic Product. At a glance, growing 15 Billion trees in ten years is expected to contribute over one hundred trillion shillings through provision of various products and services. Further, the Institute will conduct expert trainings to directly create livelihood opportunities

for the local communities in line with the Kenya Government's Bottom-up Economic Transformation Agenda (BETA) through the Institute's proven model of incubating and linking research products to Community Based Organizations (CBOs) and the Small and Medium Enterprises (SMEs) for the establishment of viable bio-enterprises and tree based solutions.

I am pleased to inform you that the Institute is in the forefront of piloting and developing technologies and innovations to enhance forest and tree productivity, enhance seedling survival in the drylands, and accelerate landscape restoration using aerial seeding through planes, drones and seed-balls, and use of artificial intelligence, machine learning and Geomatics to monitor and report forest conditions.

KEFRI will continue to undertake research in management of invasive woody weeds including; *Prosopis juliflora* (mathenge), *Lantana camara*, *Cestrum* species, *Ipomoea spp.*, and *Cuscuta spp.* (dodder). The State Department of Forestry will therefore continue to support the Institute to achieve its strategic role in providing quality tree germplasm, sharing information, technologies, innovations and capacity building of stakeholders for the successful implementation of the national goal of growing 15 Billion trees by 2032 for livelihood improvement and sequestering carbon to enhance climate change mitigation and adaptation.

Mr. Gitonga Mugambi, EBS
Principal Secretary,
State Department of Forestry,
Ministry of Environment, Climate Change and Forestry

FOREWORD BY THE CHAIRMAN, BOARD OF DIRECTORS

Forestry contributes about 3.6% to the GDP in Kenya but has a potential for increased growth. Various Government policies including; The Constitution of Kenya 2010, Kenya Vision 2030, and the National Forest Programme 2016-2030 underscore the importance of forestry research for environmental management and conservation. The Kenya Forestry Research Institute (KEFRI) plays a critical role in fulfilling the need for

research based environmental conservation by conducting research in forestry and allied natural resources and providing information and innovations for sustainable development. In implementing its activities KEFRI has embraced the concept of Strategic Planning and has successfully implemented six (6) Strategic Plans. The Institute has now developed this 7th Strategic Plan, 2022-2027 that that will guide KEFRI in delivering its mandate.

Research outputs will be enhanced through strengthening thematic and programme based approach to research and development through a multidisciplinary approach. This will be achieved by placing emphasis on research in: tree seed science; restoration of degraded landscapes in line with the UN Decade on restoration; and climate change. To enhance delivery of its mandate, KEFRI will expand its infrastructure through development of additional physical facilities, laboratories and farmer's resource centres, and ICT facilities to improve connectivity with the world.

The Board of Directors will work closely with KEFRI management, the Ministry of Environment, Climate Change and Forestry and all stakeholders to provide a conducive environment for successful implementation of this 7th Strategic Plan. The Board will also ensure that this Strategic Plan is implemented through timely preparation of annual work plans and performance contracts, as well as regular monitoring and evaluation.

On behalf of the Board of Directors I take this opportunity to thank all stakeholders who provided invaluable input during the development of this 7th KEFRI Strategic Plan 2022-2027 and I am confident that the proposed activities will transform the Kenyan landscapes and positively impact livelihoods.

A handwritten signature in blue ink, appearing to be 'S. Mwathethe', written over a horizontal line.

Gen (Rtd) Samson Mwathethe EGH, MBS, DCO
Chairman, KEFRI Board of Directors

PREFACE BY THE CHIEF EXECUTIVE OFFICER

Strategic planning is an important tool for organizations to guide the development of realistic goals and objectives to achieve their mandates. Kenya Forestry Research Institute (KEFRI) adopted strategic planning approach in 1989 to provide direction for the Institute in achieving the mandate of research in forestry and allied natural resources. This 7th Strategic Plan, which has adopted a thematic and programme based approach has been

developed to guide the Institute's Research and Development agenda for five years from 2022 to 2027. In the development of this Strategic Plan, consideration has been given to goals and aspirations of national and International plans, specifically to strengthening research in emerging issues of climate change, biodiversity loss, and remediation of polluted forest environment, and development of appropriate tree based enterprises for livelihood improvement.

Notable achievements realized during implementation of the KEFRI 6th Strategic Plan include; development of information, technologies and innovations for increased productivity of forests and trees, increased production and distribution of quality tree germplasm including tree seeds, cuttings, tissue culture seedlings and establishment of elite breeding populations of indigenous and commercial tree species towards the attainment of 30% tree cover, use of biological agents for control of forest pests, management of *Prosopis juliflora* (mathenge) through utilisation, refinement of new forest products, contributions to forest policy development, piloting aerial seeding in Maasai Mau Forest Block and use of breakthrough digital innovations including JazaMiti; a species to site matching guide in tree growing, monitoring and recording in addition to improving research infrastructural facilities, staff skills development, and digitization of data and information which continue to be shared through various media channels.

Implementation of the 6th Strategic Plan encountered challenges that included; inadequate resources, inadequate land for research and development, lack of sufficient seed processing and storage facilities, and disruptions caused by COVID-19 pandemic which slowed down implementation of planned activities. However, we are happy to report that the Government of Kenya through a strategic intervention supported the

construction of eighteen (18) seed centres which will increase the Institute's seed production capacity from 15 Metric Tonnes (MT) to 100 MT annually to meet the targets of 15 Billion trees by 2032.

The 7th Strategic Plan adopts thematic, multi- sectoral, and multidisciplinary programme research approach for impact. This approach is in line with the National Forest Programme (NFP) 2016-2030. Strategic objectives of this Plan have also been aligned to; Kenya Vision 2030, Ministry of Environment, Climate Change and Forestry Strategic Plan 2023-2027, Bottom-up Economic Transformation Agenda (BETA), Kenya Green Economy Strategy and Implementation Plan 2016-2030, as well as regional and international strategies including the Sustainable Development Goals (SDGs), and the UN Decade of Restoration (2021-2030) Agenda. The Institute aims at; enhancing forestry technology development, capacity building of stakeholders, diversifying and improving research products and services to meet needs of the government's economic model for livelihood improvement.

This 7th Strategic Plan has incorporated necessary checks and balances to ensure that robust monitoring and evaluation is carried out to achieve the intended results. Therefore workplans and budget projections will be reviewed annually based on available funds and country needs. On resource requirements, KEFRI will count on the continued strategic support from the Kenya Government, development partners and collaborators to enhance research facilities and tree seed infrastructure and establish relevant research centres of excellence in the eco-regions to enhance farmers' and stakeholder access to information, innovations, and technologies to achieve the 15 Billion tree growing strategy by 2032. The Institute remains focused on being a centre of excellence in research in forestry and allied natural resources nationally, regionally and globally. KEFRI management will ensure effective implementation of this 7th Strategic Plan and calls upon all stakeholders to support the Institute in implementing this Plan in order to enhance environmental resilience and contribute to the country's socio-economic development.

Jane W. Njuguna (PhD)

Ag. Director, Kenya Forestry Research Institute

EXECUTIVE SUMMARY

The Kenya Forestry Research Institute (KEFRI) embraced strategic planning in 1989 to guide its research and development operations. Development of this seventh (7th) Strategic Plan 2022-2027 involved a review of the 6th KEFRI Strategic Plan 2018-2022. This Plan is in line with: the Constitution of Kenya, 2010; Kenya Vision 2030; National Forest Programme (NFP, 2016-2030); Forest Conservation and Management Act (FMCA, 2016); draft National Forest Policy (2016); Climate Change (Amendment) Act, 2023 and the Ministry of Environment, Climate Change and Forestry Strategic Plan 2023-2027. The plan takes special recognition of the need to develop appropriate technologies for livelihood improvement and climate resilience to realize the goals of the Bottom-up Economic Transformation Agenda (BETA); and Kenya Green Economy Strategy and Implementation Plan 2016-2030. The plan has laid emphasis on the Institute's national mandate of contributing to 15 Billion Tree Growing Strategy to achieve 30% tree cover by 2032 by providing quality tree seeds.

In formulating this strategic plan, an assessment of both external and internal operating environments was undertaken. This involved analyzing Strengths, Challenges, Opportunities and Threats (SCOT) of the Institute to determine the possible roles of Policy, Political, Economic, Social, Technological, Legal, Environmental and Governance (P-PESTLEG) factors on the plan. A stakeholder analysis was also conducted and cross-cutting institutional issues, which might affect KEFRI's effectiveness in realizing its Mission were identified. Results of the SCOT, P-PESTLEG and stakeholder analysis facilitated the revision of KEFRI's Vision and Mandate.

The KEFRI Mandate, Vision and Mission statements and Core Values to guide implementation of the 7th Strategic Plan are:

Mandate

- i) Conduct research and development in forestry and allied natural resources;
- ii) Disseminate research findings;
- iii) Build capacity of stakeholders in forestry and allied natural resources; and
- iv) Establish partnerships and cooperate with other research organizations and institutions of higher learning in joint research and training.

Vision

A research centre of excellence in forestry and allied natural resources for sustainable development.

Mission

To conduct research in forestry and allied natural resources for sustainable development through innovations, capacity building and technology transfer.

Core Values

The Institute's core values which will guide implementation of this Strategic Plan are:

- ***Excellence:*** Committed to high standards of professionalism
- ***Creativity and Innovation:*** Promote, support and implement new ideas, methods and products
- ***Integrity:*** Uphold honesty, high moral standards and intolerance to corruption
- ***Teamwork:*** Build cordial working relations and team spirit
- ***Inclusivity:*** Equal access to opportunities and resources
- ***Networking:*** Strive to attain sustainable networks and partnerships
- ***Customer Focus:*** Oriented to customer needs and satisfaction

This Strategic Plan 2022-2027 will achieve the following strategic objectives which are to:

- i. Coordinate implementation of research and development activities
- ii. Enhance forest productivity for improved livelihoods and environmental sustainability
- iii. Generate technologies for management and conservation of forest landscapes and resilience to climate change for sustainable development
- iv. Develop technologies for efficient processing and utilization of forest products for livelihood improvement
- v. Generate information to guide development of policies, regulatory and institutional frameworks to enhance governance in the forest sector for socio- economic development
- vi. Provide technical support services, conduct expert training courses and disseminate research findings to support forestry development
- vii. Enhance corporate publicity for increased visibility and ensure quality of research and service delivery
- viii. Enhance partnerships and linkages for implementation of joint activities and resource mobilization
- ix. Enhance partnerships and linkages for joint implementation of national and county activities
- x. Coordinate implementation of corporate services activities
- xi. Strengthen institutional capacity for research and development

- xii. Strengthen internal controls, improve operational efficiency and promote good governance and ethical behaviour
- xiii. Define institutional goals and enhance ability to identify and manage risks and protect assets
- xiv. Undertake management of the procurement function, offer technical advice on procurement issues and ensure compliance with procurement policies, rules and regulations
- xv. Provide professional secretarial and legal support to KEFRI Board of Directors and the Institute
- xvi. Enhance revenue collection
- xvii. Strengthen institutional capacity in planning, monitoring, evaluation and reporting

Implementation of this Strategic Plan will be guided by five (5) Strategic Research and Development themes that include;

1. Forest Productivity, Health and Tree Improvement (FPHTI) with the following seven (7) research programmes;
 - a. Forest Germplasm and Tree Seed Production
 - b. Tree Seed Technology and Quality Assurance
 - c. Forest Biotechnology, Tree breeding and Improvement
 - d. Tree Seedling Establishment and Nursery Technologies
 - e. Silviculture of Forest Plantations and Forest Resource Assessment
 - f. Forest Health and Forest Fire Technologies
 - g. Agroforestry, Farm Forestry and Fruit Tree Farming
2. Forest Biodiversity, Climate Change, and Environment Management (FBCCEM) with the following ten (10) research programmes;
 - a. Natural Forest and Biodiversity Conservation
 - b. Mangrove Conservation and Restoration
 - c. Wetlands and Watershed Conservation
 - d. Bamboo Research and Development
 - e. Climate Change Mitigation and Adaptation
 - f. Arid and Semi arid Lands (ASALs)
 - g. Nature Based Solutions Interventions in Forests and Woodlands
 - h. Invasive Plant Species Management
 - i. Endangered and Plant Species of National Interest
 - j. Pollution Control and Rehabilitation of Polluted Land

3. Forest Products and Entrepreneurship Development (FPED) with the following seven (7) research programmes;;
 - a. Timber Processing and Utilization
 - b. Bamboo Processing, Utilization and Industry Development
 - c. Bio-energy Technology Development
 - d. Bio-prospecting and Forest Based Product Development
 - e. Products and Technologies Incubation
 - f. Gums and Resins Development
 - g. Forest Based Entrepreneurship and MSMEs Development
4. Socio-economics, Policy and Governance (SPG) with the following six (6) research programmes;
 - a. Forest Policy and Legislative Framework
 - b. Commercial Forestry Innovations and Investments
 - c. Gender and Livelihoods
 - d. Forest Resource Valuation and Accounting
 - e. Forest Extension Research
 - f. Bio-cultural Heritage
5. Forest Research Support Services (FRSS) with the following eight (8) research programmes;
 - a. Biometrics and Geomatics
 - b. Training and Capacity Building
 - c. Knowledge Management
 - d. Information and Communication Technology
 - e. Bio-science Research and Laboratory Coordination
 - f. Artificial Intelligence and Machine Learning
 - g. Space Technologies
 - h. Information Dissemination and Technology Transfer

The five technical thematic areas will be supported by the following departments in order to effectively and efficiently deliver KEFRI's mandate. These are:

- a. Corporate Affairs and Quality Assurance
- b. Corporate Services Directorate that include
 - (i) Finance
 - (ii) Human Resource Management

- (iii) Administration
- (iv) Supply Chain Management
- (v) Revenue Generation Unit
- (vi) Partnerships and Resource Mobilization
- (vii) National and County Technical Liaison
- (viii) Planning, Strategy and Risk Management
- (ix) Monitoring and Evaluation
- (x) Corporation Secretary and Legal Services
- (xi) Internal Audit

KEFRI will adopt the Balanced Score Card (BSC) approach to guide, measure and report on the status of execution of this Strategic Plan. A Corporate Implementation Matrix was developed and will form the basis for preparation of annual work-plans.

Management and coordination of Research and Development activities will be undertaken at various levels that include: The Board of Directors; Executive Committee, National Forestry Research Advisory Committee, and the Eco-regional Research Consultative Committees.

The Institute has established a risk management process that will be used to identify, analyze, evaluate and mitigate the risks that are likely to be encountered during implementation of this Strategic Plan. The anticipated risks could be strategic, operational, financial and technological.

In order to implement the 7th Strategic Plan, financial, human and physical resources will be required. Financial requirements for the 2022/2023 FY are estimated at KES 3,015.8 billion that is projected to grow to KES 9,962.3 billion by 2026/2027 FY. This budget will be financed through Government of Kenya annual allocation, internally generated funds and external funding from development partner grants as well as Public-Private Partnerships.

Monitoring and Evaluation (M&E) will be undertaken to track the implementation of the Plan. The M & E process will be used to measure accomplishments and detect deviations, and also where there may be need for adjustment for appropriate and timely action. Monitoring and Evaluation tools will include; annual implementation matrix review, annual performance contracts and work-plans, annual budget and quarterly expenditure reviews, and annual staff appraisals. A mid term review of the strategic plan will be undertaken.

Kenya Forestry Research Institute (KEFRI) Headquarters, Muguga

CHAPTER ONE

INTRODUCTION

1.0 Background

Kenya Forestry Research Institute (KEFRI) is a state corporation established in 1986, under the Science and Technology Act (Cap 250) of the Laws of Kenya. The Act has since been repealed but is accredited by the Science, Technology and Innovation (STI) Act No. 28 of 2013. The Institute's mandate is anchored in the Forest Conservation and Management Act No. 34 of 2016 as the agency to undertake research in forestry. KEFRI is certified in both ISO 14001:2015 Environmental Management Systems (EMS) and ISO 9001:2015 Quality Management Systems (QMS) and therefore conforms to international standards on environmental and quality management systems.

KEFRI embraced the concept of strategic planning from 1989 and has since implemented six (6) strategic plans. This 7th Strategic Plan 2022-2027 adopts an integrated thematic and programme based research approach in line with the National Forest Programme 2016-2030.

1.1 Mandate

- i) Conduct research and development in forestry and allied natural resources;
- ii) Disseminate research findings;
- iii) Build capacity of stakeholders in forestry and allied natural resources; and
- iv) Establish partnerships and cooperate with other research organizations and institutions of higher learning in joint research and training.

1.2 Functions

1. Develop research and development programmes to provide information and technologies for sustainable development of forestry and allied natural resources.
2. The Institute shall, in consultation with relevant organizations -
 - (a) Prepare forestry research and development strategies for the country;
 - (b) Conduct expert training courses in forestry and allied natural resources;
 - (c) Disseminate research findings to support forestry development in the country and counties; and
 - (d) Participate in development and monitoring of national forest standards.
3. Compile and submit a report on regular basis to the Cabinet Secretary relating to forestry research and development.

4. Advise the Cabinet Secretary, to declare any tree species or family of tree species to be protected in the whole country or in specific areas thereof, and shall cause this information to be disseminated to the public by order published in a Gazette notice.
5. Advise the Cabinet Secretary to reverse the protection of any tree species or family of tree species if the protection is no longer necessary.
6. Develop regulations or guidelines for the protection and regeneration of a protected tree species.

1.3 Major Achievements under KEFRI 6th Strategic Plan 2018-2022

During the period under review KEFRI realized the following major achievements;

- Established 288 ha of seed orchards and seed stands
- Produced and distributed 158,336 kilogrammes of high quality tree seed
- Embarked on expansion of seed centres from one at Muguga to 18 seed centres in selected areas across the eco-regions and sub-centres
- Continued with advanced breeding of *Melia volkensii* and *Acacia tortilis*
- Developed 144 technologies for: establishing and managing forest plantations and trees on-farm; sustainable forest landscapes, management of wetlands and riparian ecosystems, and efficient processing and utilization of wood and non- wood forest products
- Improved management and monitoring of various tree pests including; cypress aphid, blue gum chalcid, bronze bug, red gum lerp psyllid, Eucalyptus snout beetle and diseases such as *Teratosphaeria gauchensis*, canker, and dieback
- Established permanent sample plots in forests and woodlands ecosystems for collection of data on ecological trends and dynamics in Arabuko Sokoke Forest, Buda Forest and Aberdares Forest

Melia in dryland agroforestry system

Plantation of improved Melia

- Undertook ecological studies in various forest types to secure a broad range of goods and environmental services from Aberdares Forest, Arabuko Sokoke Forest, Buda Forest, Mbeere Hills, and Taita Hills.
- Rehabilitated 3,500 ha of degraded Maasai Mau Forest through aerial seeding
- Developed bio-pesticide from *Commiphora africana* resin extract to repel *Cimex lectularius* (bed-bugs)
- Undertook chemical characterization and efficacy test for *Melia volkensii* extracts as a bio-pesticide against agricultural insect pests of economic importance
- Collaborated with Kenya Wood Preservers Association in determining the strength and treatability properties of electricity transmission poles to ensure compliance to KEBS standards
- Produced 160 scientific publications including; peer-reviewed journal papers, technical notes, research notes, guidelines, extension materials, policy briefs, book chapters, and conference proceedings. These were distributed to various stakeholders
- Conducted 115 capacity building courses to various stakeholders in: seed and seedling production; rehabilitation of natural forests; Participatory Natural Resources Management (PNRM); bamboo value chain; and adaptation to climate change in Africa
- Held the 5th KEFRI Scientific Conference themed 'Contribution of Forestry Research to Sustainable Development' in April 2018, and one Commercial Forestry Investment Conference and Expo in April 2021
- Realized eighteen (18) strategic partnerships on fundraising, and developed and signed thirty (30) Memorandum of Understanding (MoUs) with development partners
- Completed construction of office blocks, laboratories and farmers resource centres in Lamu, Marigat, Taita Taveta and Lodwar
- The Institute was certified in both ISO 9001:2015 and ISO 14001:2015 Management Systems to meet international standards as well as enhance environmental conservation, and conform to a customer focused service delivery
- Developed the 'Jaza Miti App', a species - site matching tool to enhance tree growing and enable achievement of the 30% tree cover by 2032

Bare Maasai Mau degraded forest in 2019

Delicate *Podocarpus falcatus*, *Croton megalocarpus*, and *Dombeya torrida* after one year

Prunus africana, *Juniperus procera* and *D. torrida* seedlings struggling with thick undergrowth September 2023

JazaMiti; the species to site matching tool for seedling resilience

1.4 Lessons learnt during implementation of KEFRI 6th Strategic Plan

- Partnerships, networks, and collaborations enhanced research and development
- Awareness creation increases adoption of technologies from research in forestry and allied natural resources
- There is need to devolve forestry research and development to the counties for impacts
- Active engagement with the private sector enhances forestry development
- There is need to intensify research in climate change and blue economy

CHAPTER TWO

ROLE OF KEFRI IN THE IMPLEMENTATION OF GLOBAL AND NATIONAL FORESTRY AGENDA

2.0 Introduction

KEFRI contributes to global, continental, regional and national forestry agenda through development of technologies, generation of information, and knowledge sharing in forestry and allied natural resources.

2.1 Global Forestry Agenda

The Institute is an active member of various international forestry related organizations and networks including; International Union of Forest Research Organizations (IUFRO), International Network of Bamboo and Rattans (INBAR), International Seed Testing Association (ISTA), Organization for Economic Co-operation and Development (OECD), and Central America and Mexico Coniferous Resources Cooperative (CAMCORE).

KEFRI contributes to other global forestry agenda set by the United Nations Economic and Social Council (UN-ECOSOC) through the United Nations Forum on Forests (UNFF) and other Multilateral Environmental Agreements (MEAs) including; United Nations Framework Convention on Climate Change (UNFCCC), the Convention on Biological Diversity (CBD), and the United Nations Convention to Combat Desertification (UNCCD).

2.2 Continental Forestry Agenda

At continental level, KEFRI ascribes to Agenda 2063 of The African Union Commission (AUC); African Forest Landscape Restoration Initiative (AFR 100) for restoring degraded landscapes and the Sustainable Forest Management Framework (SFMF) for Africa 2020-2030. Kenya has made a commitment to restore 5.1 million ha of degraded forests and landscapes by 2030 and KEFRI is a key player towards achievement of this commitment. KEFRI is a member of continental research networks including; Forestry Research Network for Sub-Saharan Africa (FORNESSA); Network for Natural Gums and Resins in Africa (NGARA) which is hosted in KEFRI; and African Forest Forum (AFF).

2.3 Regional Forestry Agenda

Regionally, Kenya is a member of the East African Community (EAC) and Common Market for Eastern and Southern Africa (COMESA) and implements The East African States Protocol on Environment and Natural Resource Management and EAC Climate Change Policy.

2.4 National Forestry Agenda

The national forestry agenda is drawn from various national legal and strategy documents which include; the Kenya Constitution 2010, Kenya Vision 2030, National Forest Programme 2016 - 2030, Forest Conservation and Management Act (FCMA, 2016), Draft National Forest Policy 2021, and Climate Change (Amendment) Act 2023. This Strategic Plan is aligned to the Ministry of Environment, Climate Change and Forestry Strategic Plan 2023 - 2027, Bottom-up Economic Transformation Agenda (BETA) and Kenya Green Economy Strategy and Implementation Plan 2016-2030. The plan has a special focus on the Institute's national mandate of contributing to 15 Billion Tree Growing Strategy to achieve 30% tree cover by 2032.

CHAPTER THREE

SITUATIONAL ANALYSIS

3.0 Introduction

Development of the 7th Strategic Plan has taken into consideration; an environmental scan using SCOT and P-PESTLEG analysis that identifies factors that influence operation of the Institute during the Plan period. This chapter also includes a stakeholder analysis, their roles, expectations, and mutual areas of collaboration.

3.1 Review of 6th Strategic Plan

The 6th Strategic Plan review provided the road map for implementation of research and development strategies and initiatives to address the Institute's strategic goals namely; effective contribution to the national minimum tree cover of 10%, and improving livelihoods of communities and households through sustainable forest management.

3.2 Environmental Analysis

3.2.1 Internal situational analysis using SCOT

The Institute conducted a Strengths, Challenges, Opportunities and Threats (SCOT) analysis in order to assess internal and external factors as well as determine its current and future potential in delivering its mandate. The process was participatory and involved both internal and external stakeholders.

Strengths

The SCOT analysis established that KEFRI has strengths in various aspects including; human resources, and research and infrastructural facilities. The strengths (Table 1) give the Institute a competitive advantage to leverage on.

Table 1: KEFRI's *Competitive Strengths*

| No | Strength | Strategic Implication |
|----|--|--|
| 1 | Experienced and qualified research scientists | <ul style="list-style-type: none"> • High quality research for impact • Generation of appropriate technologies and innovations • Potential to mobilize resources through networks, collaborations and partnerships • International recognition through indexed rankings • High expertise for capacity building in forestry and allied natural resources |
| 2 | Availability of modern research facilities | <ul style="list-style-type: none"> • Quality research output • Enhanced collaborations • Quality training and advisory services in forestry and allied natural resources • Potential for revenue generation |
| 3 | Strong network of national, regional, and international collaborators and partners | <ul style="list-style-type: none"> • National and international recognition and support for research • Increased visibility and funding |
| 4 | Established high quality seed sources | <ul style="list-style-type: none"> • Provision of quality tree germplasm • Support commercial forestry and restoration of landscapes |
| 5 | A repository of forestry technologies and information products | <ul style="list-style-type: none"> • Easy access to technologies and information • Enhanced exchange of information • Increased visibility |
| 6 | Decentralized and devolved research and development activities to the Eco-region Research Programmes | <ul style="list-style-type: none"> • Easy access by stakeholders • Enhanced delivery of products and services suited to local needs |
| 7 | Enhanced capacity in dissemination of research findings | <ul style="list-style-type: none"> • Enhanced international recognition and visibility • Increased adoption of forestry technologies |
| 8 | Leading regional public forestry research institution | <ul style="list-style-type: none"> • Positive image and publicity • Leadership in national and regional research and development in forestry and allied natural resources |
| 9 | ISO 14001: 2015 EMS and ISO 9001:2015 QMS certified | <ul style="list-style-type: none"> • Quality environmental management • Quality service delivery • International recognition • Enhanced corporate image • Confidence of development partners |

Challenges

Challenges with strategic implications that KEFRI encountered in the course of implementing the 6th Strategic Plan are shown in Table 2.

Table 2: Challenges Encountered during Implementation of KEFRI 6th Strategic Plan

| No | Challenge | Strategic Implication |
|-----------|--|---|
| 1 | Inadequate funding | <ul style="list-style-type: none">• Inadequate infrastructure and human resource• Inability to complete planned research and development activities• Reduced research output• Inadequate research facilities in some eco-regions |
| 2 | Inadequate staffing in emerging specializations | <ul style="list-style-type: none">• Limited research output in specific disciplines |
| 3 | Inadequate access to land for research and development | <ul style="list-style-type: none">• Limited implementation of research and development activities |
| 4 | Limited automation of processes | <ul style="list-style-type: none">• Reduced efficiency in service delivery |
| 5 | Slow adoption of forestry technologies | <ul style="list-style-type: none">• Continued environmental degradation• Low impact on livelihoods |
| 6 | New and emerging invasive plant species, tree pests and diseases | <ul style="list-style-type: none">• Increased demand for development of management technologies and strategies |
| 7 | Inadequate legal framework to mainstream forestry research and development | <ul style="list-style-type: none">• Inability to maximize on outputs |
| 8 | Disruption by COVID 19 pandemic | <ul style="list-style-type: none">• Disruption of research implementation |

Opportunities

The SCOT analysis identified the following opportunities (Table 3) to leverage on while implementing the KEFRI 7th Strategic Plan.

Table 3: Opportunities Identified through SCOT Analysis

| No | Opportunity | Strategic Implication |
|----|---|---|
| 1 | Climate change mitigation and adaptation | <ul style="list-style-type: none"> • Carbon markets • Increased uptake of forestry as an investment • Increased integration of forest and tree based mitigation and adaptation measures |
| 2 | Emergence of green and blue economies and associated incentives | <ul style="list-style-type: none"> • Increased availability of forestry products, services and investments • Enhanced research funding in mangroves research • Leveraging forestry development in wetlands and inland waters • Increased green jobs |
| 3 | Global forest financing | <ul style="list-style-type: none"> • Potential for resource mobilization |
| 4 | Favourable government plans and strategies | <ul style="list-style-type: none"> • Enhanced prioritization of forestry in the national development agenda • Funding for the 15 BN national tree growing programme • Increased funding from development partners • Promotion of nature based solutions • Mainstreamed environmental education in school curricula • Implementation of the national government housing agenda |
| 5 | Favorable global campaign for environmental/ biodiversity conservation and restoration such as SDGs | <ul style="list-style-type: none"> • Increased funding and partnerships in forestry research and development • Uptake of technologies for restoration of forests and landscapes • Demand for Payment for Ecosystem Services (PES) models |
| 6 | Technological advancement, artificial intelligence / machine learning | <ul style="list-style-type: none"> • Increased efficiency in service delivery • Improved visibility and corporate image |
| 7 | Recognition of indigenous traditional knowledge in forestry development | <ul style="list-style-type: none"> • Enhanced bio-prospecting research • Low cost solutions for forestry interventions |

Threats

External factors which can impact negatively on performance of the Institute are as shown in Table 4.

Table 4: Threats Identified through SCOT Analysis

| No | Threat | Strategic Implication |
|----|---|--|
| 1 | Loss of seed sources through illegal activities | <ul style="list-style-type: none">• Inadequate amounts of quality tree seed |
| 2 | Competition with other land uses | <ul style="list-style-type: none">• Inadequate access to land for research |
| 3 | Lack of specific legislation for forestry research | <ul style="list-style-type: none">• Weak legal framework for articulating KEFRI research and development role |
| 4 | Increased imports of forest products from outside the country | <ul style="list-style-type: none">• Decrease in investment in forestry production and processing• Loss in foreign exchange• Loss of jobs |
| 5 | Economic instability and budget cuts | <ul style="list-style-type: none">• Delayed implementation of research activities |
| 6 | Pandemics and natural calamities | <ul style="list-style-type: none">• Slowed down the implementation of planned activities |

3.2.2 External situational analysis using P-PESTLEG

P-PESTLEG analysis took into account macro-environmental factors that may affect implementation of a Strategic Plan. The factors include; policy, political, economic, socio-cultural, technological, legal, environment and governance. A P-PESTLEG analysis on this Strategic Plan identified issues in seven areas (Table 5).

Table 5: P-PESTLEG Analysis

| Factors | Aspect | Strategic Implication | Mitigation Measure |
|------------------|--|--|---|
| Policy | 15 Billion Tree Growing Strategy to achieve 30% tree cover by 2032 | <ul style="list-style-type: none"> Increased funding | <ul style="list-style-type: none"> Increase seed and seedling production |
| | Kenya Green Economy Strategy and Implementation Plan 2016-2030 | | |
| | Bottom-up Economic Transformation Agenda (BETA) | | |
| Political | Political goodwill from the government | <ul style="list-style-type: none"> Increased funding | <ul style="list-style-type: none"> Implement government strategic projects and provide advice on sector emerging issues |
| | Devolved governance structure | <ul style="list-style-type: none"> Increased demand for forestry technologies and information, and knowledge products | <ul style="list-style-type: none"> Establish or strengthen research centres in counties |
| | Presidential Directive | <ul style="list-style-type: none"> Demand for seed and seedling to increase tree cover to 30% by 2032 | <ul style="list-style-type: none"> Increase seed and seedling production and nursery capacities |
| Economic | Anticipated economic growth | <ul style="list-style-type: none"> Demand for investment in forestry products and services | <ul style="list-style-type: none"> Establish forestry innovation and investment support centre |
| | Inflation and fluctuations in foreign exchange rates | <ul style="list-style-type: none"> The fluctuations will affect projects cost | <ul style="list-style-type: none"> Plan costs within acceptable margins Hedge against currency fluctuation (Dollar/Euro accounts) |

| Factors | Aspect | Strategic Implication | Mitigation Measure |
|----------------------|--|---|--|
| | Commercialization of tree growing | <ul style="list-style-type: none"> • Demand for tree growing as a business | <ul style="list-style-type: none"> • Develop technologies for commercial forestry |
| | Global demand for high quality wood products | <ul style="list-style-type: none"> • A major shift towards product based breeding | <ul style="list-style-type: none"> • Develop and deploy product-based breeding strategies for species of economic value • Enhance product diversification and reconstitution |
| | Land sub-division into uneconomic units | <ul style="list-style-type: none"> • Reduction in land available for forestry research and development | <ul style="list-style-type: none"> • Develop agroforestry technologies and introduce new appropriate tree species onto farmlands |
| | Increased urbanization | <ul style="list-style-type: none"> • Encroachment into forests and sensitive ecosystems | <ul style="list-style-type: none"> • Develop urban forestry policies, guidelines, and technologies • Introduce appropriate tree species for urban environment |
| | Unmet community preference on products and services | <ul style="list-style-type: none"> • Poor corporate image | <ul style="list-style-type: none"> • Diversify product development and services |
| Technological | Emerging health issues including; major pandemics (Covid-19), lifestyle diseases, drug and substance abuse | <ul style="list-style-type: none"> • Negatively impact on staff performance | <ul style="list-style-type: none"> • Develop and deploy sound health policies for staff |
| | Keeping pace with technological advancement in research and development | <ul style="list-style-type: none"> • Demand for modern equipment and facilities for research and development | <ul style="list-style-type: none"> • Deploy, service, and maintain current modern equipment and facilities • Procure modern equipment as need arises • Develop a replacement or decommissioning plan for obsolete equipment |

| Factors | Aspect | Strategic Implication | Mitigation Measure | |
|----------------|--|---|--|--|
| Legal | Emerging trends in the ICT operational environment | <ul style="list-style-type: none"> Requirement for adoption of new ICT technologies | <ul style="list-style-type: none"> Plan, budget and procure new ICT facilities | |
| | Developments in social media and mobile technology | <ul style="list-style-type: none"> Demand for social media dissemination platforms | <ul style="list-style-type: none"> Enhance use of social media platforms | |
| | Constitutional requirement for achieving and maintaining a minimum of 30% tree cover | <ul style="list-style-type: none"> Demand for seed and seedling to maintain and exceed tree cover of 30% | <ul style="list-style-type: none"> Increase seed and seedling production and nursery capacities | |
| | Emerging laws and regulatory frameworks | <ul style="list-style-type: none"> Requirement for compliance | <ul style="list-style-type: none"> Track and comply with relevant emerging laws and regulatory frameworks | |
| | Devolved forestry functions | <ul style="list-style-type: none"> Widened scope for more engagement with devolved units | <ul style="list-style-type: none"> Develop working MoUs and MoAs with relevant devolved entities | |
| | Multilateral Environmental Agreements (MEAs) relevant to forestry research | <ul style="list-style-type: none"> Requirement for domestication of relevant MEAs | <ul style="list-style-type: none"> Provide information to guide development and review of relevant MEAs Develop working MOUs and MOAs to address relevant MEAs | |
| | Tree seed regulations | <ul style="list-style-type: none"> Requirement for tree seed certification | <ul style="list-style-type: none"> Apply to KEPHIS for authority on self certification Align KEFRI tree seed production with requirement of existing regulations | |
| | Environmental degradation and disturbance | <ul style="list-style-type: none"> Emergence of invasive and parasitic plant species Emergence of tree pests and diseases | <ul style="list-style-type: none"> Develop environmental management strategies Develop rehabilitation technologies | |
| | Environmental | | | |

| Factors | Aspect | Strategic Implication | Mitigation Measure |
|-------------------|---|--|---|
| Governance | Over-reliance on exotic tree species | <ul style="list-style-type: none"> Lack of improved indigenous species Negative impact on local biodiversity | <ul style="list-style-type: none"> Undertake species trials for indigenous species Undertake tree improvement for indigenous species |
| | Increased interest in tree growing | <ul style="list-style-type: none"> High demand for quality germplasm Demand for capacity building Reduced area for crop farming | <ul style="list-style-type: none"> Develop species-site matching Develop tree growing policies for farming areas Integrate appropriate trees on farms |
| | Climate change | <ul style="list-style-type: none"> Rise in pest and disease outbreaks, and fire incidences Low forest productivity Change of weather patterns Rising waters in lakes, oceans, rivers and dams Increased degradation | <ul style="list-style-type: none"> Undertake Pest Risk Analysis Develop pest and disease reference database Carry out fire management studies Monitor forest productivity Select trees species for climate change resilience |
| | Low compliance to laws and regulations | <ul style="list-style-type: none"> Increased litigations Increased expenditure | <ul style="list-style-type: none"> Adherence and compliance to relevant policies laws and regulations Increase awareness on key policies, laws and regulations to stakeholders |
| | National Forestry Programme (NFP 2016–2030) | <ul style="list-style-type: none"> Requirement for adherence | <ul style="list-style-type: none"> Adherence to the NFP strategic frameworks in forestry research planning and implementation |
| | Frequent change of policies and directives | <ul style="list-style-type: none"> Diversion from core mandate | <ul style="list-style-type: none"> Adapting to changes and Undertake mid-term reviews |

3.3 Stakeholders Analysis

KEFRI will work with various stakeholders drawn from public agencies, county governments, development partners, private sector, communities, individuals and employees. The roles of respective stakeholders and mutual expectations are shown in Table 6

Table 6: Stakeholders Analysis Matrix

| Stakeholder | Role /Functions of the Stakeholder | Stakeholder's Expectations from KEFRI | What KEFRI should do to meet Stakeholder's Expectations | What the Stakeholder should do to assist KEFRI |
|---|---|--|--|--|
| State Corporations: KFS, NACOSTI, KWS, WARA, KWTA, KENGEN, TARDA, RDAs, NMK, NEMA, KIPPRA, NRF, KENNIA, NTZDC | Undertake development, regulatory and service | Provision of technologies and information | Develop and provide appropriate technologies and information | <ul style="list-style-type: none"> - Identify issues and problems for research - Support collaborative research on specific issues |
| National Research Institutions KALRO, KIRDI, KEMRI, KEMFRI, KWRI, KIPPRA | Research for technology development | Collaboration and information exchange /sharing | Create linkages and networks for seamless engagements | Operationalize tools of engagement e.g. MoUs, MoA, LoA |
| Universities and Institutions of Higher Education | Training, education and research | <ul style="list-style-type: none"> - Joint research - Staff exchange - Student attachment and supervision | <ul style="list-style-type: none"> - Provide high level of expertise, collaboration, professionalism, commitments and cooperation | <ul style="list-style-type: none"> - Timely requests and engagements for timely actions and facilitation |

| Stakeholder | Role /Functions of the Stakeholder | Stakeholder's Expectations from KEFRI | What KEFRI should do to meet Stakeholder's Expectations | What the Stakeholder should do to assist KEFRI |
|--|--|---|--|--|
| National Government ministries and departments eg. MECC&F, MoE, The National Treasury, County Governments (47) | <ul style="list-style-type: none"> - Provide oversight - Development and service provision | <ul style="list-style-type: none"> - Compliance to statutory obligation, - Technical support and provision of information | <ul style="list-style-type: none"> - Undertake its mandate efficiently, - Account for resources - Respond to enquiries timely - Rationalize its operations | <ul style="list-style-type: none"> - Timely funding, - Provide supervision and timely feedback - Effectively communicate the policy framework |
| Media | <ul style="list-style-type: none"> - Provide publicity | <ul style="list-style-type: none"> - Provision of timely, accurate and reliable information | <ul style="list-style-type: none"> - Enhanced awareness on environment and forestry | <ul style="list-style-type: none"> - Fair and response coverage and reporting |
| Judiciary | <ul style="list-style-type: none"> - Interpret and advice on legal matters | <ul style="list-style-type: none"> - Abide by the law | <ul style="list-style-type: none"> - Fair and prompt dispensation on legal issues | <ul style="list-style-type: none"> - Fair representation on legal issues |
| Parliament | <ul style="list-style-type: none"> - Enact laws, regulations on policy framework | <ul style="list-style-type: none"> - Timely submission of draft policies and bills | <ul style="list-style-type: none"> - Timely legislation of policies and bills | <ul style="list-style-type: none"> - Oversight |

| Stakeholder | Role /Functions of the Stakeholder | Stakeholder's Expectations from KEFRI | What KEFRI should do to meet Stakeholder's Expectations | What the Stakeholder should do to assist KEFRI |
|--|--|---|---|---|
| Development partners: JICA, USAID, EU, SIDA, FINNIDA, DANIDA, GIZ | Support for research and development activities | <ul style="list-style-type: none"> - Resources for proposal development - Proper management and accountability of funds | <ul style="list-style-type: none"> - Project implementation, reports and financial accounting | <ul style="list-style-type: none"> - Communicate priority development strategies - Timely response to requests - Provide expertise when required |
| UN Agencies: UNEP, UNDP, FAO | <ul style="list-style-type: none"> - Provide high level technical support and joint project implementation - Provide donor funds to implement projects | Collaboration, implementation and delivery of project and accountability of funds | <ul style="list-style-type: none"> - High level collaboration - Timely reporting of project implementation progress - Financial accounting | <ul style="list-style-type: none"> - Timely information on current development initiatives - Timely response to requests - Provide expertise as required |
| Consultative Group on International Agricultural Research (CGIAR) e.g. CIFOR, ILRI, ICRAF | Provide high level technical support and joint project implementation | <ul style="list-style-type: none"> - Collaboration, implementation and delivery of projects - Accountability of funds | <ul style="list-style-type: none"> - High level collaboration - Timely reporting of project implementation progress and - Financial accounting | <ul style="list-style-type: none"> - Timely information on current development - Develop and implement joint research initiatives - Timely response to requests - Provide expertise when required |

| Stakeholder | Role /Functions of the Stakeholder | Stakeholder's Expectations from KEFRI | What KEFRI should do to meet Stakeholder's Expectations | What the Stakeholder should do to assist KEFRI |
|--|--|--|---|--|
| CBOs, FBOs /NGOs | <ul style="list-style-type: none"> - Facilitate development activities, Lobbying advocacy | Technologies and information provision | Provide appropriate technologies and information | <ul style="list-style-type: none"> - Identify issues and problems for research - Provide support (financial / in-kind) |
| Service Providers | Provide quality goods and services on a timely basis | <ul style="list-style-type: none"> - Efficient and transparent procurement process -Timely payment for procured services | <ul style="list-style-type: none"> - Conform to statutory procurement requirements - Maintain efficient system for processing payment | <ul style="list-style-type: none"> - Provide adequate documentation - Timely delivery of quality products and services |
| Private sector communities and companies | Implement development activities | Technologies and information provision | <ul style="list-style-type: none"> - Provide appropriate technologies and information - Sign MoA | <ul style="list-style-type: none"> - Identify issues and problems for research - Provide support (financial / in-kind) |
| Employees | Effectively and efficiently deliver KEFRI mandate | Favorable terms and conditions of service | <ul style="list-style-type: none"> - Clear job description, motivation, policy and procedures manuals - Provision of adequate resources to facilitate execution of duties | Commitment to service delivery, integrity, teamwork, courtesy, professionalism and reliability |

DRYLAND ECO-REGION RESEARCH PROGRAMME

Dryland Eco-region Research Programme, Kitui

Garissa Sub-regional Research Centre

Kibwezi Sub-regional Research Centre

CHAPTER FOUR

STRATEGIC FOCUS

4.0 Introduction

This chapter presents a roadmap for the Institute’s stewardship of its mandate by setting strategic direction for the five years from 2022 to 2027. KEFRI Vision, Mission, Core Values, Strategic Goals, and Strategic Objectives have been identified to guide implementation of this Strategic Plan. The strategic objectives present specific outcomes that the Institute aims to achieve towards realizing its mandate.

4.1 Vision

A research centre of excellence in forestry and allied natural resources for sustainable development

4.2 Mission

To conduct research in forestry and allied natural resources for sustainable development through innovations, capacity building and technology transfer

4.3 Core Values

The Institute’s core values which will guide implementation of this Strategic Plan are:

- **Excellence:** Committed to high standards of professionalism
- **Creativity and Innovation:** Promote, support and implement new ideas, methods and products
- **Integrity:** Uphold honesty, high moral standards and intolerance to corruption
- **Teamwork:** Build cordial working relations and team spirit
- **Inclusivity:** Equal access to opportunities and resources
- **Networking:** Strive to attain sustainable networks and partnerships
- **Customer Focus:** Oriented to customer needs and satisfaction

4.4 Strategic Goals

1. Develop forestry technologies to contribute towards achieving and maintaining a minimum of 30% tree cover by 2032
2. Improve household livelihoods through forestry based solutions

4.5 The Strategic Objectives are to:

- i. Coordinate implementation of research and development activities
- ii. Enhance forest productivity for improved livelihoods and environmental sustainability

- iii. Enhance stakeholder access to high quality tree germplasm in the counties through the tree seed centres
- iv. Generate technologies for management and conservation of forest landscapes and resilience to climate change for sustainable development
- v. Promote use of modern technologies to accelerate restoration of degraded landscapes and forests
- vi. Develop technologies for efficient processing and utilization of forest products for livelihood improvement
- vii. Generate information to guide development of policies, regulatory and institutional frameworks to enhance governance in the forest sector for socio-economic development
- viii. Provide technical support services, conduct expert training courses and disseminate research findings to support forestry development
- ix. Enhance corporate publicity for increased visibility and ensure quality of research and service delivery
- x. Enhance partnerships and linkages for implementation of joint activities and resource mobilization
- xi. Enhance partnerships and linkages for joint implementation of national and county activities
- xii. Enhance coordination, planning and implementation of corporate services activities
- xiii. Strengthen institutional capacity for research and development
- xiv. Strengthen internal controls, improve operational efficiency and promote good governance and ethical behaviour
- xv. Define institutional goals and enhance ability to identify and manage risks and protect assets
- xvi. Undertake management of the procurement function, offer technical advice on procurement issues and ensure compliance with procurement policies, rules and regulations
- xvii. Provide professional secretarial and legal support to KEFRI Board of Directors and the Institute
- xviii. Enhance revenue collection
- xix. Strengthen institutional capacity in planning, monitoring, evaluation and reporting
- xx. Digitize and automate institute processes

4.6 Implementation Strategy

The Director KEFRI shall provide overall coordination for implementation of this 7th Strategic Plan. The Directorates of Research and Development and Corporate Services will ensure implementation of the planned activities through themes and departments as follows;

4.6.1 Research and Development Themes and Departments

Implementation of the 7th KEFRI Strategic Plan will be guided by nine (9) Strategic Research and Development Themes. Activities under these themes will be conducted in five (5) Eco-region Research Programmes, eleven (11) Sub-regional centres and five (5) research stations. The national research programme at Karura will undertake research on forest products development. Activities in centres under each research themes will be implemented through thematic programmes.

4.6.1.1 Forest Productivity, Health and Tree Improvement (FPHTI)

Forest Productivity, Health and Tree Improvement (FPHTI) research theme will focus on:

1. Research in tree breeding and improvement, biotechnology, conservation of forest genetic resources; and production of high quality forest germplasm and tree seed. The proposed interventions aim at expanding seed sources, improving protection and management of seed sources, intensifying seed production and distribution, and quality assurance of tree germplasm and tree seed.
2. Generating technologies for establishment of plantations and sustainable management of forests.
3. Agroforestry and integration of high value trees on farms including fruit trees.
4. Research and advisory services for, control of forest pests, diseases and forest fires. The theme is structured into the following seven (7) Research Programmes:
 - Forest Germplasm and Tree Seed Production
 - Tree Seed Technology and Quality Assurance
 - Forest Biotechnology, Tree breeding and Improvement
 - Tree Seedling Establishment and Nursery Technologies
 - Silviculture of Forest Plantations and Forest Resource Assessment
 - Forest Health and Forest Fire Technologies
 - Agroforestry, Farm Forestry and Fruit Tree Farming

This thematic area will contribute to creating green jobs in seed collection and distribution, seed source maintenance, seedling production, plantation assessment, forest protection, fire management, agroforestry, fruit tree farming and timber processing.

Tissue culture seedlings of *M. volkensii* and rooting Sandalwood seedlings through marcots

Cypress aphids

Dieback of Cypress and stem canker on Eucalypts

4.6.1.2. Forest Biodiversity, Climate Change, and Environment Management (FBCCEM)

Forest Biodiversity, Climate Change, and Environment Management (FBCCEM) research theme focuses on development of technologies for improved natural forest management and landscape restoration. The theme will also undertake research on rehabilitation, sustainable conservation, management and utilization of forests in water towers, wetlands and riparian ecosystems. The theme will develop technologies and information for mitigation and adaptation to climate change; conservation, restoration and sustainable use of terrestrial, inland freshwater ecosystems and their services. The theme will address challenges facing forestry sector through the following ten (10) Research Programmes as shown below:

- Natural Forest and Biodiversity Conservation
- Mangrove Conservation and Restoration
- Wetlands and Watershed Conservation
- Bamboo Research and Development
- Climate Change Mitigation and Adaptation
- Arid and Semi Arid Lands (Asals)
- Nature Based Solutions Interventions in Forests and Woodlands
- Invasive Plant Species Management
- Endangered and Species of National Interest
- Pollution Control and Rehabilitation of Polluted Lands

This thematic area will create green jobs, enhance livelihoods and food security through conservation and restoration of degraded lands, watersheds and mangrove, bamboo utilization, nature based solutions through apiculture and aquaculture development, utilization of invasive plant species and other bio-enterprises

Riverbank stabilization using bamboo

Restoration of degraded arid and semi-arid areas

Continuous restoration of degraded mangrove areas at the Kenya Coast

Management of Prosopis by utilization using half-orange kiln for efficient charcoal production in Marigat

Long rooted seedling technology to enhance survival in the drylands

Mechanised hole drilling to break soil hard pan and enhance survival and establishment of seedlings

4.6.1.3 Forest Products and Entrepreneurship Development (FPED)

Forest Products and Entrepreneurship Development (FPED) research theme focuses on development and promotion of efficient technologies for wood and non-wood products harvesting, processing and utilization of forest and allied natural resources for improved livelihoods and sustainable forest management. The theme will evaluate new methods of using wood in construction, engineering and reconstitution of wood, bio-materials, bio-chemicals, bio-plastics, energy products and food additives. FPED is important to national security through the implementation of forest forensics and advisory services. The theme will address challenges facing wood resources and non-wood forest products through the seven (7) Research Programmes as shown below:

- Timber Processing and Utilization
- Bamboo Processing, Utilization and Industry Development
- Bio-Energy Technology Development
- Bio-Prospecting and Forest Based Product Development
- Products and Technologies Incubation
- Gums and Resins Development
- Forest Based Entrepreneurship and MSMEs Development

The theme will enhance investment and wealth creation through entrepreneurship skills development, products development and marketing and capacity building through incubation. It will contribute to achievement of food security and universal health through bio-prospecting, medicinal products development and forest based enterprises. The theme will also contribute to national security through forest forensic services.

On-farm framed chain saw for higher timber recovery

Gums

Myrrh

Bamboo furniture

Frankincense

Promoting circular economy: Using waste wood to make high value timber products

Aloe and Baobab products

4.6.1.4 Socio-economics, Policy and Governance (SPG)

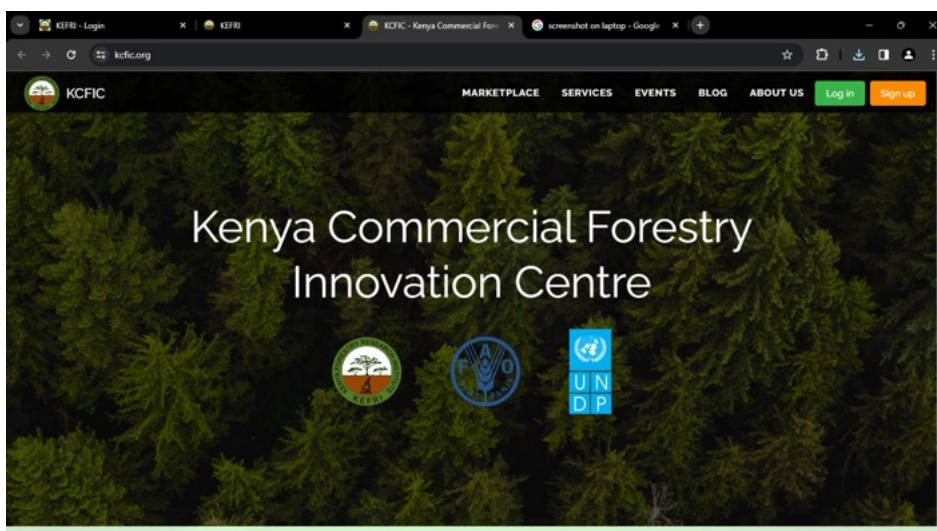

Socio-economics, Policy and Governance (SPG) research theme will focus on governance, community and stakeholder interests in forests and associated goods and services. It will contribute to formulation of policies and legislation on management of forestry and the environment. The theme will undertake research on marketing and trade in forestry products for enhanced livelihoods and wealth creation. The research will; address issues related to gender and people's interests in forests, undertake total forests and environmental valuation and natural capital accounting to inform policy, and resource allocation to the forest sector. Research will be carried out to guide forest investment, trade and sector development. This will be achieved by addressing goals and objectives of the six (6) Research Programmes as follows:

- Forest Policy and Legislative Framework
- Commercial Forestry and Investment
- Gender and Livelihoods
- Forest Resource Valuation and Accounting
- Forest Extension Research
- Bio-cultural Heritage

This thematic area will contribute to improved governance in the forest sector, commercial forestry development and private sector investment leading to increased job opportunities and incomes, resource evaluation by stakeholders and increased opportunities for Payment of Eco-system Services (PES) and carbon markets. It will also contribute to better understanding of the actual contribution of forests to the national economy and increased resource allocation to the sector

KEFRI Contribution to forest sector policy development

- Ammendment of the Forest Conservation Management Act 2016
 - Seeds and plant varieties (Forest Tree Seed) Regulations 2023
 - The Forests (Participation in Sustainable forest management) Regulations 2023 (draft)
 - The Forests (Incentives and Benefits Sharing) Regulations 2023 (draft)
 - KEFRI Bill to be a chapter in the proposed ammendment of the Forest Conservation and Management Act 2023
 - Several other regulations in the sector
 - Publications and dissemination materials
-

4.6.1.5 Forest Research Support Services (FRSS)

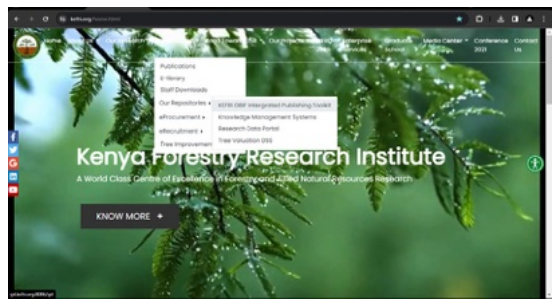

Forest Research Support Services is a critical theme to the Institute as it occupies the interface between researchers and stakeholders through provision of various services including; dissemination of research findings and knowledge products, research data management, laboratory services, and capacity building of stakeholders in sustainable development of forestry and allied natural resources. Establishment of a specialized forestry training school at postgraduate level will improve the practice of professional forestry. The ICT section is a major enabler to research and development and management of the Institute through internet connectivity, knowledge and data management systems and Enterprise Resource Planning (ERP). The theme will achieve these through goals and objectives set out in;

- Biometrics and Geomatics
- Training and Capacity Building
- Knowledge Management
- Information and Communication Technology
- Bio-science Research and Laboratory Coordination
- Artificial Intelligence and Machine Learning
- Space Technologies
- Information Dissemination and Technology Transfer

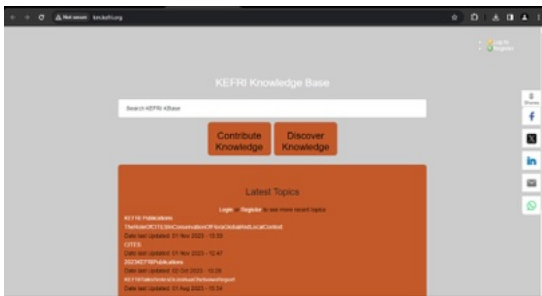

The theme will create entrepreneurs through capacity building in tree seed and seedling production and nursery management. It will provide information and knowledge products that will contribute to increased investment in the forestry sector.

4.6.2 Departments under Research and Development Directorate

All the research and development activities will be managed and coordinated by Senior Deputy Director - Research and Development (SDD-R&D). The following departments will also be domiciled under the SDD-R&D;

- Resource Mobilization, Partnerships and International Relations
- National and County Technical Liaison
- Monitoring, Evaluation and Reporting

The departments will; enhance resource mobilization, technology transfer to Counties and Ministries, Departments and Agencies (MDAs) and monitor evaluate and report the Institute's activities.

4.6.3 Departments under Director's Office

The following departments will be domiciled under the Director's office;

- Corporate Affairs and Quality Assurance (CA&QA)
- Supply Chain Management
- Internal Audit
- Corporation Secretary/Legal Services
- Revenue Generation Unit

4.6.4 Departments under Corporate Services (CS) Directorate

This Directorate will provide a supporting role to research and development by creating a conducive operational environment through upgrading and managing physical infrastructure, as well as optimizing utilization and performance of human, financial and other resources. The departments are:

- Human Resource Management
- Finance and Accounts
- Administration
- Planning and Risk Management

Integration of themes, strategic objectives and strategies to realize the goals under this Strategic Plan is shown in Table 7.

Table 7: Linking Research Themes/Departments, Strategic Objective and Strategies

| No. | Directorate/ Theme/ Department | Strategic Objectives | Strategies/Activities |
|-----|--|---|---|
| 1 | Director's Office | Provide strategic leadership to achieve the institutes mandate | 1.1 Develop the Institute strategic plan 1.2 Develop and recommend to the board the Institute strategies and plans 1.3 Develop clear policies for the management of the Institutes assets and liabilities 1.4 Ensure compliance with the Institute's policies and other legal instruments 1.5 Management of potential risks 1.6 Ensuring succession planning and adherence to human resource management strategies 1.7 Monitoring and evaluation of performance contracts 1.8 Mobilise resources for the Institute activities 1.9 Advising the cabinet secretary on gazettement and degazettment of protected tree species |
| 2 | Research and Development Directorate | To coordinate implementation of research and development activities | 2.1 Provide strategic leadership in coordination and planning of research and development programmes 2.2 Oversee monitoring and evaluation of implementation of research and development activities 2.3 Linking between the board and management 2.4 Coordinate development of the workplan and performance contracting 2.5 Promote outreach of forest programs 2.6 Development of policies for forestry development 2.7 Coordinate publicity of the Institution 2.8 Organise for national and international conferences for scientific exchange 2.9 Provide oversight on dissemination of research findings for impact 2.10 Coordinate mobilization of resources for research and development 2.11 Create linkages and networks between KEFRI and other relevant organizations |

| No. | Directorate/ Theme/ Department | Strategic Objectives | Strategies/Activities |
|-----|---|--|--|
| 3 | Forest Productivity, Health and Tree Improvement | To enhance forest productivity for improved livelihoods and environmental sustainability | <ul style="list-style-type: none"> 3.1 Improve tree germplasm 3.2 Enhance forest germplasm and tree seed production 3.3 Enhance forest germplasm and tree seed distribution and conservation 3.4 Enhance forest germplasm and tree seed research 3.5 Enhance tree seed quality control and certification 3.6 Enhance tree production 3.7 Enhance nursery research 3.8 Improve forest plantation inventory methods 3.9 Establish forest productivity and tree improvement database 3.10 Enhance silvicultural methods in plantations and trees on farm 3.11 Surveillance and management of tree pests and diseases 3.12 Forest fire impact assessment 3.13 Enhance development and uptake of agroforestry technologies in rural and urban areas 3.14 Incorporate trees in agro-pastoral systems |
| 4 | Forest Biodiversity, Climate Change and Environment Management | To generate technologies for management and conservation of forest landscapes and resilience to climate change for sustainable development | <ul style="list-style-type: none"> 4.1 Strengthen biodiversity conservation and sustainable use of natural forests 4.2 Enhance forest landscapes restoration and rehabilitation 4.3 Strengthen conservation and sustainable use of mangroves 4.4 Enhance conservation of wetlands and riparian ecosystems 4.5 Strengthen forest hydrology research 4.6 Enhance soil and water conservation 4.7 Enhance bamboo production 4.8 Enhance contribution in Inter-governmental Panel on Climate Change (IPCC) 4.9 Strengthen implementation of REDD+ strategy |

| No. | Directorate/ Theme/ Department | Strategic Objectives | Strategies/Activities |
|-----|---|--|--|

CHAPTER FIVE

IMPLEMENTATION AND COORDINATION

5.0 Introduction

This chapter provides a framework for implementation and coordination of planned activities to achieve the set targets during the Strategic Plan period 2022 - 2027. The Balanced Scorecard (BSC) approach will be adopted in assessing performance as it lays emphasis on; customer, financial, internal processes, learning and growth perspectives. To ensure efficiency in service delivery, Enterprise Resource Planning (ERP) system will be used to improve efficiency in implementation of the planned activities.

5.1 Strategic Implementation of Corporate Matrix

The corporate implementation matrix will be used to track implementation of the planned activities. The matrix will be applied by cascading activities/initiatives to departments, themes, programmes, teams, and individuals to achieve respective strategic objectives.

5.2 Strategy Map

KEFRI Strategy Map for the plan period 2022-2027 is shown in Figure 1. Under each Balanced Score Card (BSC) approach, the Strategy Map outlines the Key Result Areas (high impact outcomes) that will be realized after achieving one or more objective(s) as outlined in the Corporate Implementation Matrix (Annex 2).

VISION

A research centre of excellence in forestry and allied natural resources for sustainable development

STRATEGIC GOALS

1. Develop forestry technologies to contribute towards achieving and maintaining a minimum of 30% tree cover by 2032
2. Improve household livelihoods through forestry based solutions

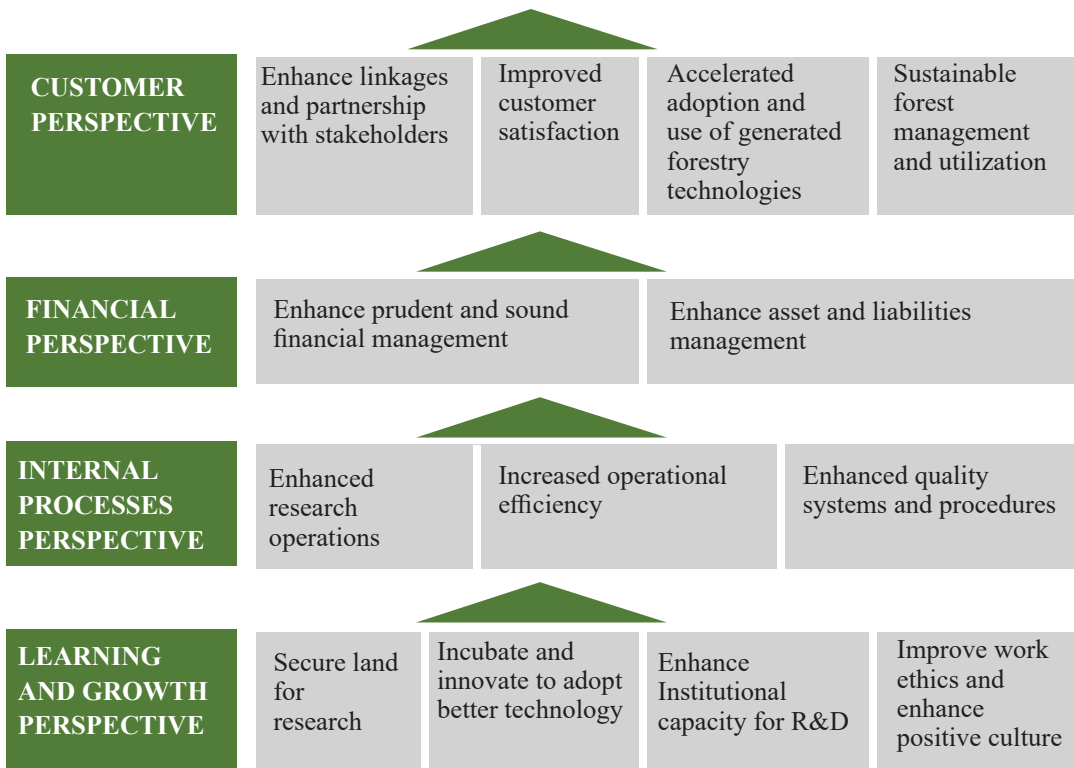

Figure 1: KEFRI Strategy Map

5.3 Coordination and Management of Research and Development activities

Coordination and management of research and development activities is through the KEFRI organizational structure (Annex 1). Research and development coordination will be as shown in Figure 2

Figure 2: Research and Development Implementation Flow Chart

5.3.1 *The Board of Directors of KEFRI*

The Board of Directors, on behalf of the Government of Kenya will have overall oversight of the Strategic Plan. The Board will meet at least once quarterly to review status of implementation of the Strategic Plan through quarterly reports of the annual work plans which are drawn from the Strategic Plan.

5.3.2 *The Director*

The Director bears the Vision of the Institute and provides strategic direction and reports to the Board of Directors.

5.3.3 Research and Development and Corporate Services Directorates

KEFRI operations are divided into two directorates; Research and Development and Corporate Services. Each directorate is headed by a Senior Deputy Director who reports to the Director. Research and Development Directorate implements the Institute's core mandate supported by the Corporate Services Directorate.

5.3.4 Executive Committee

The Executive Committee shall be chaired by the Director and shall meet quarterly to receive and report progress made on implementation of the Strategic Plan. The Executive Committee shall have two sub-committees: one consisting of Thematic Deputy Directors under Research and Development chaired by the Senior Deputy Director Research and Development (SDD-R&D); and the other consisting of Deputy Directors under Corporate Services chaired by Senior Deputy Director Corporate Services (SDD-CS). The two sub-committees shall meet quarterly to review progress on implementation of the Strategic Plan under their respective departments and their recommendations shall be submitted to the Executive Committee for consideration before submitting to the Board of Directors for deliberation.

5.3.5 Annual Consultative Committee

The Annual Consultative Committee Meeting (CCM) shall be the planning and resource allocation committee of the Institute. It comprises members of the Executive Committee and Regional Directors. The Consultative Committee shall meet at the end of every financial year to review performance of the year, set targets and allocate funds to prioritized activities to be implemented in the subsequent year.

5.3.6 Eco-Region Research Consultative Committee

The Eco-Region Research Consultative Committee (ERCC) is a public participation forum held annually at the Eco-Region Research Programmes by engaging stakeholders to identify research problems and review existing ongoing activities. Recommendations from stakeholders shall be incorporated into research proposals and presented to the CCM for funding consideration in the subsequent financial year.

5.4 Risk Management

Risk management is a critical process that identifies, analyzes, evaluates and mitigates against risks that the Institute may encounter during implementation of the Strategic Plan. It helps to ensure business continuity. The Institute has developed a risk management procedure in line with the Integrated Management System of ISO 9001:2015 on

Quality Management Systems, 14001:2015 on Environmental Management System and ERP. The risks can be categorized as: Strategic, Operational, Financial and Technological risks. The anticipated risks and their mitigation strategies are detailed in Table 8.

Table 8: Anticipated Risks and Mitigation Strategies

| Risk Category | Probable Risk | Mitigation Strategies |
|------------------------|--|---|
| Strategic risks | Possible loss of research trials | <ul style="list-style-type: none"> • Secure land ownership documents • Obtain long term land lease agreements with stakeholders • Fence research land and engage local community organizations in protection of the sites • Maintain fire management protocols • Develop and implement a Business Continuity Plan (BCP) |
| | Effects of climate change and environmental challenges | <ul style="list-style-type: none"> • Breed tree species for drought tolerance • Use of technologies for water retention and conservation • Adhere and invest in climate change impact data • Advice on tree species-site matching |
| | Insecurity | <ul style="list-style-type: none"> • Collaborate with the local administration, KFS and KWS on security matters • Sensitize staff on insecurity threats and ways to mitigate against them • Sensitize local communities on importance of KEFRI activities |
| | Tree pests and diseases outbreak | <ul style="list-style-type: none"> • Develop a database for tree pests and diseases for information dissemination • Establish a surveillance and IPM systems for identified pests, diseases and plant parasites • Establish and build capacity of response teams at Eco-region levels and create awareness among stakeholders on pest and disease outbreaks • Collaborate with disaster management organizations to respond to pest and disease outbreaks |

| Risk Category | Probable Risk | Mitigation Strategies |
|---------------------------|---|---|
| Operational risks | Breakdown of equipment and infrastructure | <ul style="list-style-type: none"> • Optimal use of available equipment and infrastructure |
| | Corruption | <ul style="list-style-type: none"> • Enforcement of the Institute's anti-corruption policies |
| | Disclosure of classified information | <ul style="list-style-type: none"> • Vet officers dealing with classified information |
| | Litigation against the Institute | <ul style="list-style-type: none"> • Compliance to law and regulations • Prudent management at the Institute |
| Financial risks | Budget cuts | <ul style="list-style-type: none"> • Lobby for more funding from the National Treasury • Seek alternative sources of funds • Map financial risk areas and mitigating measures • Undertake periodical audits |
| Technological risk | Cyber insecurity | <ul style="list-style-type: none"> • Enhance capacity of human resource in cyber security • Install and maintain cyber security systems |
| | Loss of data and information | <ul style="list-style-type: none"> • Enforce Knowledge Management Policy • Invest in secondary data back-up storage • Comply with data management regulations • Invest in cloud backup storage |

CHAPTER SIX

RESOURCE REQUIREMENTS AND MOBILIZATION

6.0 Introduction

Implementation of the 7th KEFRI Strategic Plan will require adequate financial, infrastructural, and human resources. The Institute will endeavour to mobilize resources to finance its Research and Development activities.

6.1 Financial Resources Required for Implementation of the 7th Strategic Plan

Implementation of the KEFRI 7th Strategic Plan is estimated to cost KES 34,849 billion. This will be mobilized from both internal and external sources that include:

- The Exchequer;
- Grants from development partners;
- Internally generated revenue; and
- Public Private Partnerships.

6.1.1 Strategies for resource mobilization

Resources required to implement Institute mandate has always been inadequate. In order to bridge the resource gap, the Institute will lobby and mobilize financial resources for its activities as follows:

- (i) Negotiate for increased funding from the exchequer
- (ii) Enhance strategic partnerships and collaborations with development partners for technical and financial assistance
- (iii) Enhance partnership with county governments in joint implementation of projects
- (iv) Enhance Public Private Partnerships
- (v) Enhance international relations
- (vi) Enhance revenue generation from internal sources

6.1.2 Financial projections

The total amount of funds required to implement this 7th Strategic Plan is KES 34,849 billion. Financial requirements for the 2022/2023 FY are estimated at KES 3,015.8 billion that is projected to grow to KES 9,962.3 billion by 2026/2027 FY as shown in Table 9.

Table 9: Projected Financial Requirements for the Period FY 2022/2023 - 2026/2027

| Source | Funding Projection (KES “000 000”) | | | | | | Total |
|--|------------------------------------|-----------------|-----------------|-----------------|-----------------|-----------------|------------------|
| | Base YR | 2022/2023 | 2023/2024 | 2024/2025 | 2025/2026 | 2026/2027 | |
| GOK-Grants | 1,803 | 2,722.80 | 3,430.30 | 8,564.30 | 8,645 | 9,379.30 | 32,742.00 |
| Tree seed infrastructure and research facility development* | (362.5) | (1,273) | (1,859) | (3,551) | (3,564) | (3,890) | (14,137) |
| Internally generated revenue | 129 | 134 | 140 | 145 | 151 | 157 | 727 |
| Donor Grants | 122 | 159 | 203 | 260 | 333 | 426 | 1,380 |
| Total | 2,054 | 3,015.80 | 3,773.30 | 8,969.30 | 9,129.30 | 9,962.30 | 34,849.00 |

* These funds are part of the GoK grants

6.2 Physical and Research Infrastructure Requirements

Infrastructural developments planned during implementation of the 7th Strategic Plan (2022-2027) will include: construction and equipping of office blocks, farmers resource centres and laboratories in Rumuruti, Migori, Narok, Maua, Marsabit, Hola and Londiani centres; and construction of a forestry training and capacity building centre at KEFRI Muguga. The Institute will also construct; a tree seed certification unit, a tree seed gene bank in Muguga, and automated green houses in Nyeri, Migori, Gede, Rumuruti, Lamu, Garissa, Wajir and Kibwezi sub-centres. The Institute will complete ongoing construction and equip 18 seed facilities in various Eco-region Research Programmes.

In addition, the Institute will continue to expand water reticulation and fire hydrants installation in Lamu, Lodwar, Maseno and Gede centres. The Institute will construct boreholes and install solar power systems in all centres with priority for Muguga, Lamu, Kitui, Tiva, Rumuruti, Garissa and Wajir.

6.3 Human Resource Requirements

The Institute endeavors to attract, motivate, and retain specialized and competent employees through use of various retention strategies aimed at; minimizing the staffing gap, enhancing staff capacity, improving efficiency and effectiveness in service delivery, increasing employee satisfaction, promoting a positive work culture, and providing a conducive working environment.

CHAPTER SEVEN

MONITORING, EVALUATION AND REPORTING

7.0 Overview

Monitoring, evaluation, and reporting is an important management tool that KEFRI will use to track achievements against the set targets outlined in this 7th Strategic Plan. Through monitoring and evaluation (M&E) activities and reports, the Institute will track achieved outputs, detect any deviations, and take appropriate actions. The M&E process will take into account emerging issues and changes in the environment that may affect implementation of this Plan and where necessary, appropriate and timely adjustments taken.

7.1 Monitoring, Evaluation and Reporting Framework

KEFRI will use a Results-based Monitoring, Evaluation and Reporting (ME&R) framework to track and evaluate progress in implementation of the Strategic Plan.

7.2 Monitoring, Evaluation and Reporting Tools

In conducting M&E, the following tools will be applied:

- a) Annual implementation matrix
- b) Annual performance contracts and work plans
- c) Annual budget and quarterly expenditure reports
- d) Quarterly and annual research and development reports
- e) Consultative and Executive Committee Minutes
- f) Annual staff appraisal

7.3 Indicators for Measuring Performance

Measurement of performance will be carried out on the basis of the following parameters:

- a) Customer satisfaction index
- b) Increase in revenue and cost reduction
- c) Compliance to internal processes and regulatory frameworks
- d) Institutional capacity development
- e) Corporate visibility and ranking

7.4 Review of the Strategic Plan Implementation

Given the dynamic nature of research, implementation of the Plan will require comprehensive reviews to capture any emerging issues. Reviews will be done as follows;

7.4.1 Mid-Term Review

A mid-term review will be undertaken to assess the level of implementation of this Strategic Plan. The review will inform any need for changes.

7.4.2 End-Term Review

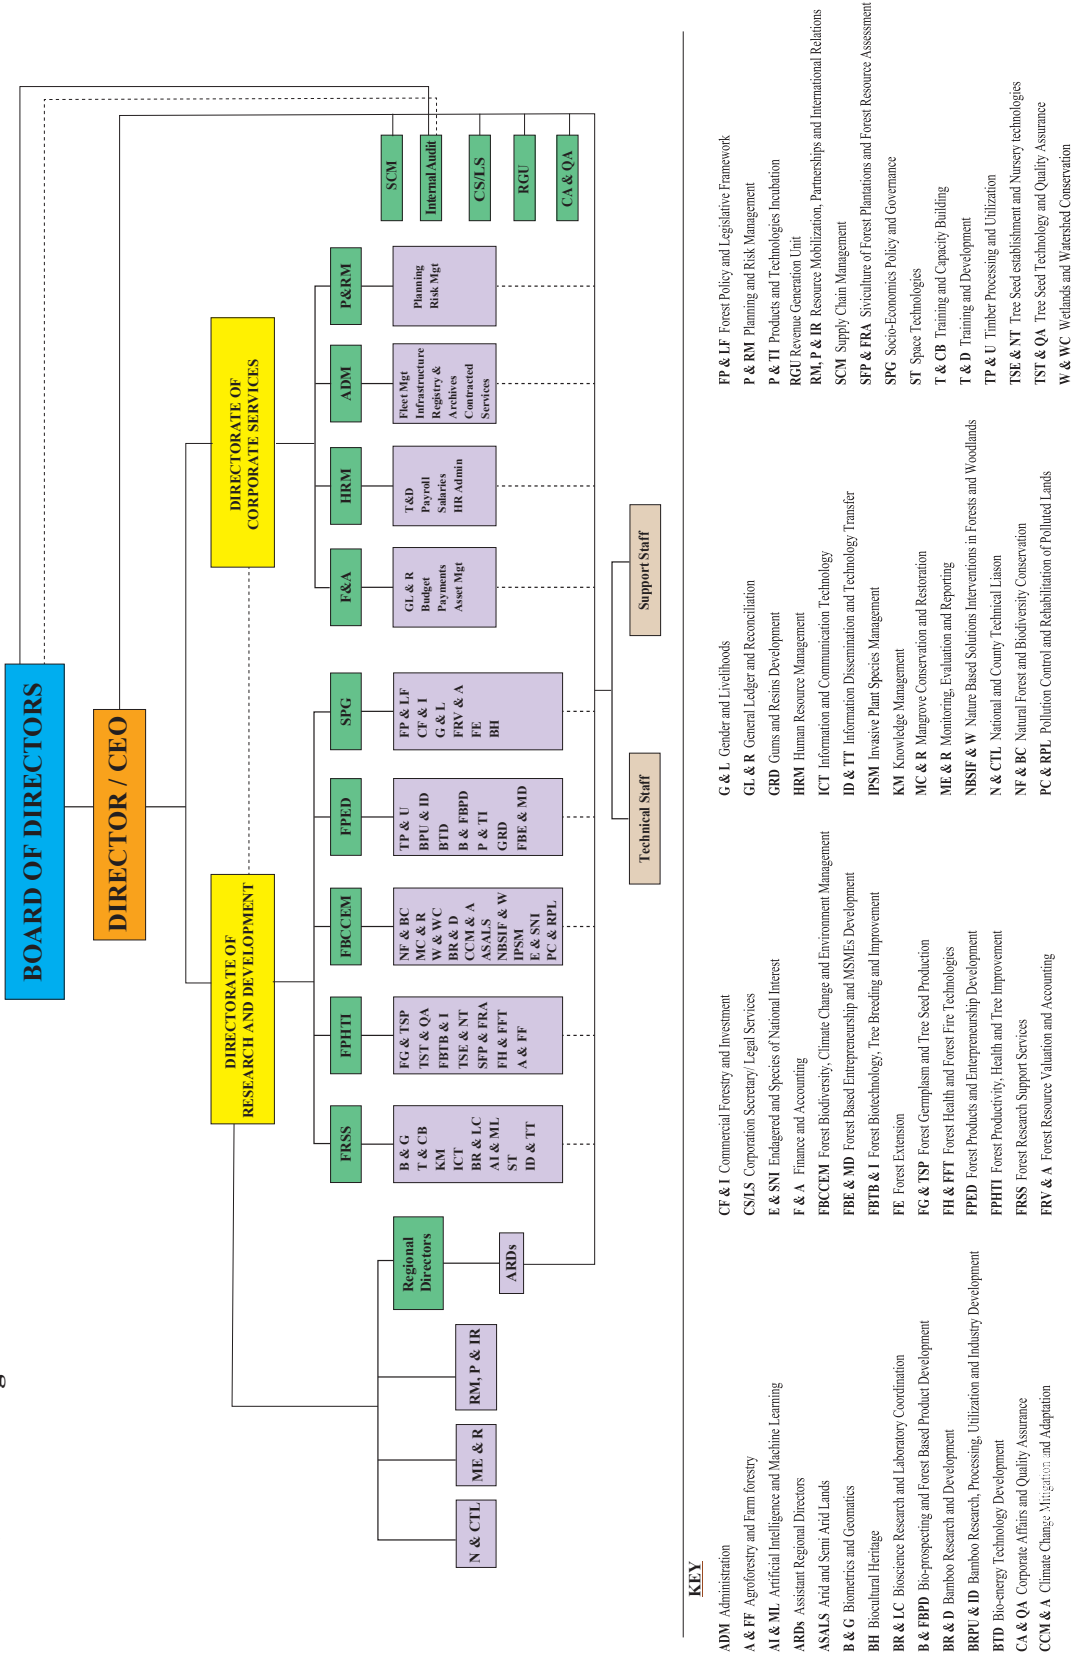

Final evaluation of the Plan will be carried out at least six months before the end of the Strategic Plan. The evaluation will entail:

- i. Measuring actual performance against set targets.
- ii. Identifying challenges encountered and lessons learnt.
- iii Recommendations to inform the subsequent strategic planning process.

ANNEXES

Annex 1: KEFRI Organizational Structure

Annex 2: Corporate Implementation Matrix

1: RESEARCH AND DEVELOPMENT DIRECTORATE

STRATEGIC OBJECTIVE: TO OVERSEE THE IMPLEMENTATION OF RESEARCH AND DEVELOPMENT ACTIVITIES

| No. | Strategy | Initiative/ Activity | Responsible person | Expected output | Measure | 5 year Target | Budget (KES Millions) | | | | | |
|-----|--|---|-----------------------|--|----------------------------|------------------|-----------------------|-----|-----|-----|-----|-----------------|
| | | | | | | | Y1 | Y2 | Y3 | Y4 | Y5 | Total Budget |

Annex 3: Research Implementation in the Eco-regions

1: Coast Eco-Region Research Programme (CERP)

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / counties | Flagship focus |
|----|------------|--|-------------------------------------|--|---|
| 1. | Coast | <p>Coast Eco Regional Research Programme undertakes research into the challenges facing coastal natural forestry ecosystems and blue economy along the Kenyan coast line that include, lowland mountain and mangrove forests; coastal forests of Arabuko-Sokoke, Diani, Kaya Ribe; Shimba Hills, Lower Tana River forests, Witu Forest Reserve, Madunguni, Marafa Brachystegia, Boni/Lungi forests, Kilibasi Woodlands, Taita Hills, agroforestry and farm forestry; and woodlots and forest plantations. They also include problems facing inland lowland forests within 100 km from the coast line specifically in generating technologies.</p> <p>The Eco-region will focus on</p> <ul style="list-style-type: none"> Restoring degraded coastal forests, mangroves, drylands and woodlands; Monitoring biodiversity loss; Development of woodlots for provision of biomass energy; Management of pests, diseases and invasive species; Establishing Permanent Sample Plots in mangrove forests to determine offtake levels, effects of land use changes; pests and diseases Developing strategies for sustainable management of Kaya Forests for livelihoods and biodiversity conservation | Kilifi (Gede Regional Headquarters) | Kilifi, Kwale, Lamu, Mombasa, Taita Taveta and Tana River Counties | <p>1. Mangroves research. Key areas include:</p> <ul style="list-style-type: none"> Understanding the influence of socio-environmental parameters on mangroves survival/establishment.. Establishing PSPs for coastal forest resource monitoring Monitoring land use land cover changes on mangrove forests Establishing mangroves offtake levels Mangrove wood value chain analysis <p>2. Kaya Forests focusing on establishing strategies for sustainable management through:</p> <ul style="list-style-type: none"> Resource status assessment Developing management strategies Evaluating opportunities for development of recreation facilities and ecotourism in kayas Understanding the influence of traditional institutional systems on kaya forest development |

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / counties | Flagship focus |
|----|------------|--|-----------------------------------|---------------------------------------|---|
| | | <ul style="list-style-type: none"> • Sustainable management and rehabilitation of tropical lowland forests and woodlands • Development of strategies to catalyze tree farming on-farms • Strengthening research on soils; tree physiology & nutrient use; tree seed research and bioprospecting of NTFPs • Development of high quality germplasm for coconuts, cashew nuts etc for agroforestry • Remediation of degraded mined areas • Fruit tree farming | | | <p>3. Tropical lowland forests and woodlands. These include the Arabuko Sokoke, Boni/Witu Forests, Tana Delta forest fragments and the montane forests of the Eastern Arch Mountains.</p> <p>Key issues include:</p> <ul style="list-style-type: none"> • Developing strategies/technologies for woodlands management including the Miombo woodlands • Documentation of indigenous Knowledge on various uses of ecological resources within the forests and woodlands • Resource assessment and mapping of prioritized products • Develop PSPs for data collection on ecological trends and dynamics of Miombo woodlands • Assessment of invasive species including dodder, prosopis etc |
| | | | | | <p>4. Tree farming. Key areas of focus will include:</p> <ul style="list-style-type: none"> • Soil and water management for enhanced tree productivity in both humid and marginal areas of the coast. The focus will also be on usage of fertilizers and irrigated tree farming • Silvicultural practices • Tree/crop interactions |

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / counties | Flagship focus |
|----|------------|--------------------|-----------------------------------|---------------------------------------|---|
| | | | | | <ul style="list-style-type: none"> Establishing forestry investment opportunities including Public Private Partnerships (PPPs), financing including social investment, and access to top notch inputs and technologies Value chain analyses Marketing and trade Urban forestry Tree seed production Key issues on tree breeding/ improvement in the coast include; Development of F1 <i>Gmelina arborea</i> materials Establishing improved Casuarina materials including plus tree selection, orchard establishment and introduction of improved materials from outside Improvement of <i>Eucalyptus camaldulensis</i> for biomass production in marginal areas |
| | | | Lamu (Mokowe) | Lamu, and Tana River Counties | <p>The sub-centre implements activities in the North Coast comprised of Lamu and Tana River Counties. Flagship projects to focus on:</p> <ul style="list-style-type: none"> Assessment of mangrove and development of mangrove guidelines, strategies and plans for sustainable utilization, management, and conservation |

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / countries | Flagship focus |
|----|------------|--------------------|-----------------------------------|--|---|
| | | | | | <ul style="list-style-type: none"> • Development of restoration and conservation strategies of endangered tree species including <i>Euphorbia tanaensis</i> • Development of strategies for management, conservation & rehabilitation of riparian ecosystems and watersheds e.g. Lake Kenyatta, Shela sand dunes, Lake Moa • Tree farming • Seed collection |
| | | | Taita Taveta (Ngerenyi) | Kwale and Taita Taveta Counties | <p>The sub-centre implements activities in the South Coast composed of Taita Taveta and Kwale Counties. Flagship projects to focus on:</p> <ul style="list-style-type: none"> • Developing landscape-based conservation models to protect biodiversity hotspots such as Kaya forests and Afriomontane forests of Taita Hills • Enhancing protection and conservation of threatened native tree species. • Promoting community led approaches in the conservation of natural resources in light of climate change. • Tree farming • Management of trans-boundary water catchments and riparian areas • Woodlands management • Tree seed development |

2. Central Highlands Eco-Region Research Programme (CHERP)

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / counties | Flagship focus |
|----|------------|---|-----------------------------------|--|--|
| 2. | CHERP | <p>Undertake forestry research mainly within Mt. Kenya and Aberdare forest ecosystems. The programme develops forestry technologies for; Forest Productivity Health and Tree Improvement, Forest Biodiversity, Climate Change and Environment Management, and Socio-economics, Policy and Governance studies. The programme also provides technical forestry research and development in the following key areas</p> <ul style="list-style-type: none"> • Diversification and domestication of selected high value tree species on-farm • Genetic improvement of selected tree species • Development of technologies for predicting and managing tree pests and diseases • Development of macro and micro-propagation techniques for key tree species such as bamboo • Development of technologies for rehabilitation and management of degraded natural forests • Development of technologies for management of invasive plant species in forest eco-systems • Development of technologies for sustainable management of natural forests and woodlands • Development of technologies for conservation and management of water catchment areas, hilltops and wetlands • Soil and water management for forestry development • Forest resource valuation • Development of policy guidelines on forest benefit sharing, through Participatory Forest Management | Muguga | Kiambu, Nairobi, Murang'a, Nyandarua, Eastern Nakuru, Northern Kajiado and Upper Machakos. | <ul style="list-style-type: none"> • Develop predictive tools for forest resource assessment • Develop guidelines for on-farm tree products valuation and markets • Develop macro and micro-propagation techniques for key tree species such as bamboo, sandal wood, <i>Waburgia ugandensis</i>, <i>Vitex keniensis</i>, <i>Grevillea robusta</i> and <i>Melia volkensii</i> • Develop guidelines for growing tree species on farms (site matching and spacing guidelines). • Develop mechanisms for prediction of occurrences and management of forest fires within Aberdare and Mt. Kenya ecosystems. • Establish and manage tree seed sources (seed stands and orchards) for commercial and indigenous tree species • Produce tree seeds/germplasm for the 15 billion tree planting strategy • Provide advisory services for management of forest pest and diseases • Develop appropriate bio-remediation technologies for polluted forest environments and damping sites such as Dandora. |

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / counties | Flagship focus |
|----|------------|---|-----------------------------------|---|---|
| | | <ul style="list-style-type: none"> Dissemination of various technologies and information on forestry through open and field days, agricultural shows, conferences and workshops, print and electronic media Train stakeholders in various aspects of forestry such as: rehabilitation of degraded natural forests, rangelands and woodlands; tree nursery establishment and management; and Participatory Forest Management (PFM) | | | <ul style="list-style-type: none"> Develop long-term strategies for conservation of water catchments and riparian areas incorporating traditional cropping patterns (Lake Olbolosat, Ondiri swamp, Thiba dam and Ndakaini dam). Undertake genetic improvement of <i>Eucalyptus grandis</i>, <i>Vitex keniensis</i>, <i>Cupressus lusitanica</i> and <i>Pinus patula</i> and hybrids for plantation establishment Establish monitoring system for vegetation changes in relation to climate change in Aberdares and Mt. Kenya ecosystems Develop and pilot framework for PES within Aberdares and Mt. Kenya ecosystems Train stakeholders on tree nursery establishment and management for achieving the 15 billion campaign Dissemination of forest technologies to eco-region stakeholders <p>Management of Ipomoea in the range lands of Kajiado county</p> <ul style="list-style-type: none"> Restoration of silvo-pastoral systems |
| | | | Rumuruti | Laikipia, Lower Samburu, Northern Nyandarua | |

4. Lake Victoria Basin Eco-region Research Programme (LVBERP)

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / counties | Flagship focus |
|----|------------|--|--|---|--|
| 4. | LBVERP | <p>Lake Victoria Basin Eco-region Research Programme (LVBERP) was established in 1989 to serve as a centre of excellence in agroforestry research. In the last decade, it has also taken up research in forest restoration, tree health, forest governance, green economy development and carbon offset as its key areas of focus. The eco-region is located in a zone with approximately 200,000 ha of natural forest (Mt. Elgon, Kakamega Forest, Malava Forest, Funyula hills, Ilkerin-Lolgorian, Gwassi hills, Wire, Koder, Lambwe Valley, Homa hills and Got Ramogi hill) which constitute about 20% of the land area; woody resources on-farm (mostly Eucalyptus spp, <i>Grevillea robusta</i>, <i>Markhamia lutea</i>, <i>Maesopsis eminii</i>, <i>Acacia</i> spp, Croton and Bamboo to a small extent) which account for close to 80% of the land area; and a few plantation forest resources which comprise <i>Pinus patula</i>, <i>Cupressus lusitanica</i> and <i>Eucalyptus</i> spp.</p> <p>Key forestry related challenges in the Lake Victoria Basin include:</p> <ul style="list-style-type: none"> • High human population density, which exerts pressure on natural forest resources • Low forest and tree cover due to poor adoption of tree planting as a culture by local communities | <p>Chebororwa /Talket / Kaptagat</p> <p>Maseno</p> | <p>Kisumu, Vihiga, Siaya, Busia, Bungoma and Trans Nzoia, Kakamega, Migori, Homa bay, Kisii, Nyamira,</p> | <ul style="list-style-type: none"> • Agroforestry research • Forest restoration studies • Tree species – site matching • Management of invasive plant species e.g., Cestrum, and parasitic plants e.g., Dodder • Phytoremediation of degraded mine lands • Soil science • Green and blue economy development • Management of wild fruits for enhanced production • Climate change research • Tree pests and diseases • Bamboo research • Forest governance studies • Information dissemination and technology transfer and capacity building • Support to get it correctly |

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / counties | Flagship focus |
|----|------------|---|-----------------------------------|---------------------------------------|--|
| | | <ul style="list-style-type: none"> • Small land holdings causing competition between trees and crops • Eucalyptus in riparian zones • Emergence of invasive plant species and parasitic plants • Emergence of tree pests and diseases | Kakamega | Kakamega, Busia and Bungoma | <ul style="list-style-type: none"> • Equatorial Rainforest research • Management of invasive plant species and parasitic plants • Bamboo research • Socio-economic policy and governance studies • Tree seed collection • Management of seed sources • Information dissemination and technology transfer and capacity building • Support for Mission 15B |
| | | <p>Under KEFRI's 7th Strategic Plan, LVBERP will focus its research on:</p> <ol style="list-style-type: none"> 1. Tree species-site suitability matching to various agro-ecological zones 2. Restoration of degraded forests, hilltops and water sources 3. Sustainable management and restoration of wetlands and riparian zones 4. Valuation of forest resources and ecosystem services 5. Water use dynamics of fast growing tree species, such as Eucalyptus. 6. Management of tree pests and diseases and invasive plants 7. Tree-crop integration in mixed farming systems 8. Promoting value chains for multipurpose trees species e.g., fitos, round poles, transmission poles, timber, firewood and tree seed | Ramogi | Siaya | <ul style="list-style-type: none"> • Tree seed collection • Management of seed sources • Information dissemination and technology transfer and capacity building • Support for Mission 15B |
| | | | Migori | Migori, Kisii, Nyamira and Transmara | <ul style="list-style-type: none"> • Tree pests and diseases • Bamboo research • Management of invasive plant species and parasitic plants • Tree seed collection • Management of seed sources • Information dissemination and technology transfer and capacity building • Support for Mission 15B |

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / countries | Flagship focus |
|----|------------|--|-----------------------------------|--|--|
| | | 9. Exploring blue and green economy development opportunities 10. Development of improved tree seed sources 11. Enhancing tree seed collection to avail quality seeds for the 15B tree growing programme 12. Production of quality planting materials towards achieving Mission 15B 13. Developing technologies for raising difficult to propagate indigenous tree species 14. Phytoremediation of degraded mines lands 15. Publishing and publicising forestry technologies | Rongo | Homa Bay and Nyamira | <ul style="list-style-type: none"> • Tree seed collection • Management of seed sources • Information dissemination and technology transfer and capacity building • Support for Mission 15B |

5. Rift Valley Eco-region Research Programme (RVERP)

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / counties | Flagship focus |
|----|------------|---|-----------------------------------|---|---|
| 5. | RVERP | <p>The Region has unique diversity in natural resources endowment, economic, cultural and political conditions with vast area of 173,854kms sq cutting across 7 agro-ecological zones. The region has over 1 million Ha. of gazetted forests that include key water towers of Mau, Cherangany and Mt. Elgon and about 200,000ha of communal and private forests. RVERRP covers 13 counties namely: Baringo, Nakuru, Bomet, Narok, Kajiado, Kericho, Nandi, Uasin gishu, Trans Nzoia, West Pokot, Elgeyo Marakwet, Samburu and Turkana.</p> <p>The specific objectives are: Technologies into the conservation, management and restoration of the diverse forest systems in seven (7)</p> <ul style="list-style-type: none"> • Development and provision of high quality forest and tree germplasm- seed orchards, seeds -development and management • Development of technologies for establishment and management of forest plantations, agroforestry and trees on farm • Development of improved nursery and plantation management techniques • Diversification of commercial tree species • Development of integrated pest management strategies for commercial tree and plant species • Development of forest and landscape restoration and rehabilitation technologies of degraded forests, woodlands and riparian areas for adaptation and mitigation to climate change | Londiani- Regional office | Nakuru, Kericho, Bomet, Narok, Uasin | <ul style="list-style-type: none"> • Commercial Plantation Forestry development • Commercial tree seed orchard development • Farm forestry • Agroforestry in the tea plantations • Studies on the tree-tea buffer zones • Natural Forest Management • Valuation of ecosystem services and piloting of PES • Forest governance and gender dynamics • Extension and dissemination research |
| | | | Turbo sub-centre | Uasin Gishu, Transzoia, Nandi and Part of Kakamega | <ul style="list-style-type: none"> • Commercial Forestry development • Seed source development and management • Fruit tree farming • Demonstration of commercial forestry |
| | | | Turkana Sub-centre | Turkana and West Pokot | <ul style="list-style-type: none"> • Technologies for rehabilitation of degraded woodlands • Integrated silvopastoral system for pastoral economy • Irrigated forestry • Agroforestry with date palms |

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / counties | Flagship focus |
|----|------------|--|---|---|--|
| | | <ul style="list-style-type: none"> Development of habitat restoration technologies/practices for invasive species Establish the viability of forest -based enterprises Contribute to formulation of forestry policies for sustainable forest management, governance and best practices in forest resources use and management Promotion of livelihood opportunities for local communities through development of NTPS natural forests and in drylands Dissemination of forestry technologies and capacity building of stakeholders Undertake total forest valuation for various purposes including; products, services and Payment for Eco-System Services (PES) | <p>Baringo sub-Center</p> <p>Maasai Mau/Narok (Mau-Serengeti Eco-system)</p> <p>Cheptongei/Kaptagat</p> | <p>Baringo, E. Marakwet and Samburu</p> <p>Narok, Bomet, Kajjado</p> <p>Elgeyo Marakwet and part of Uasin Gishu</p> | <ul style="list-style-type: none"> Invasive species Management Non-wood Forest Products-Aloes management and value addition Promotion of farm forestry Human wildlife interactions Woodlands conservation Dryland forestry Bamboo development Hydrological studies of the Mau-Mara-Serengeti ecosystem in the region Invasive species management <p>- Forestry and landslides</p> <p>- Commercial seed orchards</p> |

6. National Forest Products Research Programme (NFPRP)

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / counties | Flagship focus |
|----|------------|--|-----------------------------------|---------------------------------------|---|
| 6. | NFPRP | <p>The Programme has national mandate for research and development in forest products through the following strategic objectives:</p> <ul style="list-style-type: none"> • Conduct basic and applied research in forest products in collaboration with relevant institutions. • Promote commercialization of forest products through incubation and linkage of forest products to industries/SMEs. • Disseminate research findings in forest products. • Strengthen linkages and partnership with stakeholders. • Build capacity of stakeholders in production, processing and marketing of forest products | Karura | National focus / All Counties | <ol style="list-style-type: none"> 1. Research in timber processing and utilisation <ul style="list-style-type: none"> • Determining physical and mechanical properties of prioritized wood species • Determining performance of preservatives for wood durability - undertake efficacy trials of test preservatives • Developing seasoning schedules for emerging timber species • Evaluating the efficiency of new timber harvesting and logging technologies 2. Research in bamboo processing, utilisation and industrial development <ul style="list-style-type: none"> • Developing a bamboo utilisation strategy • Promoting efficient bamboo harvesting technologies • Determining anatomical, physical and mechanical properties of bamboo species • Developing new reconstituted wood and bamboo products • Determining the performance of adhesives and finishes for timber and bamboo |

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / countries | Flagship focus |
|----|------------|--------------------|-----------------------------------|--|--|
| | | | | | <ul style="list-style-type: none"> • Evaluating efficacy of bamboo preservatives • Developing and testing bamboo structures in construction <p>3. Research in developing technologies in bioenergy</p> <ul style="list-style-type: none"> • Optimising biomass energy conversion and utilisation technologies • Determining the combustible matter in different biomass feedstock <p>4. Research in bio-prospecting and forest based product development</p> <ul style="list-style-type: none"> • Developing a framework for enhancing bio-prospecting and utilisation of indigenous knowledge (IK) in products from natural resource • Documenting ITK on natural products and candidate species in all Eco Regions • Identifying the bio-active components from candidate species for development • Identifying and prioritize new Non Timber Forest Products (NTFPs) in the 5 eco-regions and undertake resource assessment and mapping |

| No | Eco-region | Flagship objective | Centre/ sub-centre location | Area of jurisdiction / countries | Flagship focus |
|----|------------|--------------------|-----------------------------------|--|--|
| | | | | | <ul style="list-style-type: none"> • Developing standardized products from prioritized tree species • Undertake value chain analysis of the products <p>5. Research in enhancing gums and resins utilization and conservation</p> <p>6. Research in enhancing incubation of forest products</p> <ul style="list-style-type: none"> • Building capacity of innovators and MSMEs • Conducting trainings in forest products development • Linking and promoting developed products and technologies to MSMEs • Disseminating forest technologies to stakeholders in all Eco Regions • Provision of forensic services for National security |
